1.0 EXECUTIVE SUMMARY

1.1 FINDINGS

The Phase One Group has performed a Phase 1 Environmental Site Assessment (Phase 1 ESA) in general accordance with the scope and limitations of ASTM Practice E1527-13 of the Vacant Property located at the northeast side of Capalina Road, APN 219-115-33-00 (unaddressed), in the City of San Marcos, San Diego County, California 92069 (the "subject property"). The Phase 1 Environmental Site Assessment is designed to provide Ambient Communities with an assessment concerning environmental conditions as they exist at the subject property. Any exceptions to or deletions from this scope of work are described in the report.

The site inspection was performed by Mark E. Smith, Environmental Professional, a representative of The Phase One Group, on March 23, 2022. The subject property is located at the northeast side of Capalina Road, APN 219-115-33-00 (unaddressed), in the City of San Marcos, San Diego County, California 92069.

The subject property is located on the northeast side of Capalina Road, approximately 450 feet southeast of the intersection of Capalina Road and North Rancho Santa Fe Road. West Mission Road borders the northeast side of the subject property. The subject property consists of one parcel of land totaling approximately 2.51-acres in size, identified by the San Diego County Assessor as Assessor's Parcel Number (APN) 219-115-33-00. The subject property is vacant rough-graded land covered with weeds and a couple of palm trees. The perimeter of the subject property is surrounded by a chain-link fence with a gate on the southwest side of the subject property along Capalina Road. No structures were observed on-site. Several small piles of what appeared to be construction debris in the form of large rocks were observed along the northwestern portion of the subject property. At the time of The Phase One Group's site visit, the subject property was unoccupied. No evidence of the use of reportable quantities of hazardous materials and petroleum products or the generation of hazardous waste was observed on the subject property during the site visit.

Based on a review of historical sources, the subject property appeared to be vacant pastureland from prior to 1939 until approximately 1974, when the northwestern perimeter of the subject property appeared to be vacant, rough-graded land. By 1980, the subject property appeared to be vacant, rough-graded land with what appeared to be an area graded for use as a vehicle parking area on the southeastern portion of the subject property. By 1996, the subject property appeared to be vacant, weed-abated land, and by 2005, a vehicle parking area appears to be located on the southeastern perimeter of the subject property. By 2012, the vehicle parking area was removed and the subject property appeared to be vacant, weed-abated land.

The subject property is not listed in the Envirosite Corporation (Envirosite) environmental database report.

The subject property is located within a mixed commercial/retail and residential area of the City of San Marcos. The vicinity of the subject property can be described as to the northeast; a multi-tenant commercial/retail building (1605 West Mission Road) and a medical office building (1560 Capalina Road) to the southeast; Capalina Road, followed by El Dorado Mobil Home Park (1515 Capalina Road) and The Movement Church (1609 Capalina Road) to the southwest; and the remnants of a multi-tenant commercial/retail shopping center (225-245 North Rancho Santa Fe Road) to the northwest.

The adjacent property to the southeast, 1560 Capalina Road, is listed as a CalEPA Site and HAZMAT San Diego County site on the Envirosite environmental database report. However, based on the current regulatory statuses of the adjacent properties, the adjacent properties are not expected to represent a significant environmental concern to the subject property.

1.2 CONCLUSIONS

The Phase One Group has performed a Phase 1 Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard E1527-13 of the Vacant Property located at the northeast side of Capalina Road, APN 219-115-33-00 (unaddressed), in the City of San Marcos, San Diego County, California 92069 (the "subject property"). Any exceptions to or deletions from this practice are described in Section 2.0 of this report. This assessment has revealed no evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), controlled recognized environmental conditions (CRECs) or environmental issues in connection with the subject property.

1.3 RECOMMENDATIONS

As a result of this assessment, The Phase One Group does not recommend further investigation of the subject property at this time.

This summary is not to be used alone. This report must be read in its entirety.

2.0 INTRODUCTION

2.1 PURPOSE

The purpose of this Phase 1 Environmental Site Assessment (Phase 1 ESA) is to identify existing or potential Recognized Environmental Conditions (as defined by ASTM Standard E1527-13) affecting the subject property that: 1) constitute or result in a material violation or a potential material violation of any applicable environmental law; 2) impose any material constraints on the operation of the subject property or require a material change in the use thereof; 3) require clean-up, remedial action or other response with respect to Hazardous Substances or Petroleum Products on or affecting the subject property under any applicable environmental law; 4) may affect the value of the subject property; and 5) may require specific actions to be performed with regard to such conditions and circumstances. The information contained in the Phase 1 ESA report will be used by Client to: 1) evaluate its legal and financial liabilities for transactions related to foreclosure, purchase, sale, loan origination, loan workout or seller financing; 2) evaluate the subject property's overall development potential, the associated market value and the impact of applicable laws that restrict financial and other types of assistance for the future development of the subject property; and/or 3) determine whether specific actions are required to be performed prior to the foreclosure, purchase, sale, loan origination, loan workout or seller financing of the subject property.

This Phase 1 ESA was performed to permit the User to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (42 U.S.C. §9601) liability (hereinafter, the "landowner liability protections," or "LLPs"). ASTM Standard E1527-13 constitutes "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined at 42 U.S.C. §9601(35)(B).

2.2 SCOPE OF WORK

The scope of work for this Phase 1 ESA is in general accordance with the requirements of ASTM Standard E1527-13. This assessment included: 1) a property and adjacent site reconnaissance; 2) interviews with key personnel; 3) a review of historical sources; 4) a review of environmental regulatory agency records; and 5) a review of an environmental regulatory database report provided by a third-party vendor. The Phase One Group contacted local agencies, such as environmental health departments, fire departments and building departments, in order to determine any current and/or former hazardous substances usage, storage and/or releases of hazardous substances on the subject property. Additionally, The Phase One Group researched information on the presence of Activity and Use Limitations (AULs) at these agencies. As defined by ASTM E1527-13, AULs are the legal or physical restrictions or limitations on the use of, or access to, a site or facility: 1) to reduce or eliminate potential exposure to

hazardous substances or petroleum products in the soil or groundwater on the subject property; or 2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment. These legal or physical restrictions, which may include institutional and/or engineering controls (IC/ECs), are intended to prevent adverse impacts to individuals or populations that may be exposed to hazardous substances and petroleum products in the soil or groundwater on the property.

If requested by Client, this Phase 1 ESA report may also include the identification, discussion of, and/or limited sampling of asbestos-containing materials (ACMs), lead-based paint (LBP), mold and/or radon.

2.3 REPORT RELIANCE

This assessment was performed at the request of Ambient Communities utilizing methods and procedures consistent with good commercial or customary practices designed to conform to acceptable industry standards. This report may be distributed to and relied upon by Ambient Communities, its successors and assigns and Conduit to be assigned by Ambient Communities, its successors and assigns with respect to a loan upon the project, together with any rating agency or issuer or purchaser of any security collateralized or otherwise backed up by such loan. The independent conclusions The Phase One Group's best professional judgment based on the conditions that existed and the information and data available to us during the course of this assignment. Factual information regarding operations, conditions, and test data provided by Ambient Communities, owner, or its representative has been assumed to be correct and complete.

2.4 LIMITATIONS

The information presented in this Phase 1 ESA report is based on the agreed upon scope of work as noted above. The Phase One Group makes no warranties or guarantees as to the accuracy or completeness of information obtained from information provided or compiled by others. It is possible that information exists beyond the scope of this investigation. Also, changes in subject property use may have occurred sometime in the past due to variations in rainfall, temperature, water usage, economic, agricultural or other factors. Limited site specific information was made available to The Phase One Group about the subject property. Additional information that was not found or available to The Phase One Group at the time of writing the report, may result in a modification of the conclusions and recommendations presented. This report is not a legal opinion. The services performed by The Phase One Group have been conducted in a manner consistent with the level of care ordinarily exercised by members of our profession currently practicing under similar conditions. No other warranty, expressed or implied, is made.

The Phase One Group notes that all surficial environmental assessments are inherently limited in the sense that conclusions are drawn and recommendations developed from information obtained from limited research and site evaluation. Subsurface conditions were not field investigated as part of this study and may differ from the conditions

implied by the surficial observations. Additionally, the passage of time may result in a change in the environmental characteristics at this site and surrounding properties.

The Phase One Group notes that no investigation can absolutely rule out the existence of any hazardous materials at a given site. This assessment has been based upon prior site history and observable conditions and activities. Existing hazardous materials and contaminants can escape detection using these methods.

The work performed in conjunction with this assessment and the data developed are intended as a description of available information at the dates and location given. This report does not warrant against future operations or conditions, nor does it warrant against operations or conditions present of a type or at a location not investigated. In addition, this report is not intended as a regulatory agency compliance/safety audit or for the purpose of ensuring that all applicable permits and/or operating procedures are current and/or appropriate.

The Phase One Group recommends that any periodic review of any property should include an update of information on environmental conditions in the area. The Phase One Group notes that no soils, groundwater, or potable water testing for the presence of hazardous substances was performed for this assessment.

2.5 LIMITING CONDITIONS

The findings and conclusions contain all of the limitations inherent in these methodologies that are referred to in ASTM E1527-13.

Specific limitations and exceptions to this Phase 1 ESA are more specifically set forth below:

- Interviews with past owners, operators and occupants were not reasonably ascertainable and thus constitute a data gap. Based on information obtained from other historical sources (as discussed in Section 5.1.2), this data gap is not expected to alter the findings of this investigation.

- The Phase One Group requested information relative to deed restrictions and environmental liens, and a pre-survey questionnaire from the Report User. This information was not provided at the time of the assessment.

- The Phase One Group performed the site inspection without the benefit of a key site manager and was unaccompanied. Based on the size and nature of use of the subject property (vacant land), this limited method of inspection is not expected to alter the overall findings of this assessment.

3.0 PROPERTY DESCRIPTION

3.1 PROPERTY LOCATION AND DESCRIPTION

3.1.1 Type of Property

The subject property is located on the northeast side of Capalina Road, approximately 450 feet southeast of the intersection of Capalina Road and North Rancho Santa Fe Road. West Mission Road borders the northeast side of the subject property. The subject property consists of one parcel of land totaling approximately 2.51-acres in size, identified by the San Diego County Assessor as Assessor's Parcel Number (APN) 219-115-33-00. The subject property is vacant, rough-graded land covered with weeds and a couple of palm trees. The perimeter of the subject property is surrounded by a chain-link fence with a gate on the southwest side of the subject property along Capalina Road. No structures were observed on-site. Several small piles of what appeared to be construction debris in the form of large rocks were observed along the northwestern portion of the subject property. At the time of The Phase One Group's site visit, the subject property was unoccupied. No evidence of the use of reportable quantities of hazardous materials and petroleum products or the generation of hazardous waste was observed on the subject property during the site visit.

3.1.2 Improvements

The subject property is vacant rough-graded land covered with weeds and a couple of palm trees. The perimeter of the subject property is surrounded by a chain-link fence with a gate on the southwest side of the subject property along Capalina Road. No structures were observed on-site. Several small piles of what appeared to be construction debris in the form of large rocks were observed along the northwestern portion of the subject property.

3.1.3 Current Property Use

At the time of The Phase One Group's site visit, the subject property was unoccupied. No evidence of the use of reportable quantities of hazardous materials and petroleum products or the generation of hazardous waste was observed on the subject property during the site visit.

4.0 USER PROVIDED INFORMATION

Pursuant to ASTM E1527-13, The Phase One Group requested the following site information from Ambient Communities (User of this report).

4.1 TITLE RECORDS

The Phase One Group requested title records from the User; however, title records were not available and were not provided to The Phase One Group for review.

4.2 ENVIRONMENTAL LIENS OR ACTIVITY USE LIMITATIONS

The Phase One Group requested information from the User regarding knowledge of environmental liens, activity and use limitations for the subject property. The User, Ambient Communities, was not aware of any environmental liens associated with the subject property. In addition, Kevin Fortuna, property owner representative, was not aware of any environmental liens associated with the subject property.

4.3 SPECIALIZED KNOWLEDGE

The Phase One Group inquired with the site contact regarding any specialized knowledge of environmental conditions associated with the subject property. The User, Ambient Communities, was not aware of any environmental conditions associated with the subject property. In addition, Kevin Fortuna, property owner representative, was not aware of any environmental conditions associated with the subject property.

4.4 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

The Phase One Group inquired with the User regarding commonly known or reasonably ascertainable information associated with the subject property. The User, Ambient Communities, was unaware of commonly known or reasonably ascertainable information within the local community about the subject property that is material to recognized environmental conditions in connection with the subject property. In addition, Kevin Fortuna, property owner representative, was unaware of commonly known or reasonably ascertainable information within the local community about the subject property that is material to recognized environmental conditions in connection with the subject property.

4.5 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

The Phase One Group inquired with the site contact regarding any knowledge of reductions in property value due to environmental issues. The User, Ambient Communities, was not aware of any valuation reductions associated with the subject property. In addition, Kevin Fortuna, property owner representative, was not aware of any valuation reductions associated with the subject property.

4.6 OWNER, PROPERTY MANAGER AND OCCUPANT INFORMATION

According to the San Diego County Assessor, the current subject property owner is identified as Saba Family Trust 07-24-18, who has owned the subject property since August 2, 2019. Kevin Fortuna, property owner representative, was interviewed and provided property specific information. At the time of The Phase One Group's site visit, the subject property was unoccupied. No evidence of the use of reportable quantities of hazardous materials and petroleum products or the generation of hazardous waste was observed on the subject property during the site visit.

4.7 PRIOR REPORTS

No prior reports issued for the subject property by others were provided to The Phase One Group for review.

4.8 REASON FOR PERFORMING PHASE 1 ESA

The Phase One Group understands that the findings of this study will be used by Ambient Communities for environmental due diligence purposes.

5.0 RECORDS REVIEW

5.1 GENERAL PUBLIC RECORDS

5.1.1 Physical Setting Sources

5.1.1.1 Topography

The United States Geological Survey (USGS), San Marcos, California Quadrangle 7.5-minute series topographic map was reviewed for this ESA. This map was published by the Geological Survey in 1983. According to the contour lines on the topographic map, the subject property is located approximately 583 feet above Mean Sea Level (msl). The contour lines in the area of the subject property slopes gently to the east. The subject property is depicted on the map as undeveloped.

5.1.1.2 Geology/Soils

The subject property is situated in an area underlain by undifferentiated alluvium and slope wash. The alluvium consists of poorly consolidated stream deposits of silt, sand, and cobble-sized particles derived from bedrock sources east of the subject property. The deposits mix with Holocene slope wash that commonly mantles the lower valley slopes throughout much of coastal San Diego County. The slope wash deposits are poorly consolidated surficial materials derived from nearby sources of soil and decomposed bedrock. The slope wash is deposited along the flanks of the lower valley slopes by interaction of gravity and water.

Based on information obtained from the USDA Natural Resources Conservation Service Web Soil Survey online database, the subject property is mapped as Diablo clay, 2 to 9 percent slopes (DaC), Diablo clay, 9 to 15 percent slopes, warm MAAT (DaD), and Las Flores loamy fine sand, 2 to 9 percent slopes (LeC). The Diablo series soils are formed from residuum weathered from calcareous shale, are well drained and have a moderate available water supply. The Las Flores series soils are formed from residuum weathered from siliceous calcareous sandstone, are moderately well drained and have a very low available water supply.

5.1.1.3 Hydrology

According to California's Groundwater: Bulletin 118, published by the State of California Department of Water Resources, the subject property is located in the Hydrologic Region South Coast, San Marcos Valley Groundwater Basin. This groundwater basin underlies San Marcos Valley in northwestern San Diego County. The basin is bounded by semi-permeable marine and nonmarine deposits, and impermeable granitic and metamorphic rocks. San Marcos Creek

drains this valley southwestward into Lake San Marcos. Average annual precipitation ranges from 11 to 15 inches.

The nearest surface water in the vicinity of the subject property is Lake San Marcos, located approximately 1.75-miles south-southwest of the subject property. No settling ponds, lagoons, surface impoundments, wetlands or natural catch basins were observed at the subject property during this assessment.

According to available information, a public water system operated by the Vallecitos Water District serves the subject property vicinity. According to a representative of the Vallecitos Water District, shallow groundwater beneath the subject property is not utilized for domestic purposes. The source of public water for the Vallecitos Water District is water purchased from the San Diego County Water Authority (SDCWA).

According to environmental documentation posted on the State Water Resources Control Board, GeoTracker website (http://geotracker.swrcb.ca.gov), the depth and direction of groundwater in the vicinity of the subject property is approximately 14 feet below ground surface (bgs) and inferred to flow toward the east.

5.1.2 Historical Use Information

5.1.2.1 Prior Uses of Property

Based on a review of historical sources, the subject property appeared to be vacant pastureland from prior to 1939 until approximately 1974, when the northwestern perimeter of the subject property appeared to be vacant, rough-graded land. By 1980, the subject property appeared to be vacant, rough-graded land with what appeared to be an area graded for use as a vehicle parking area on the southeastern portion of the subject property. By 1996, the subject property appeared to be vacant, weed-abated land, and by 2002, a vehicle parking area appears to be located on the southeastern perimeter of the subject property. By 2012, the vehicle parking area was removed and the subject property appeared to be vacant, weed-abated land.

5.1.2.2 Recorded Land Title Records

Environmental liens recorded against the subject property were not reported to The Phase One Group.

5.1.2.3 Chain of Title

A 50-year chain-of-title was not requested for this study. Historical use of the subject property was researched using other standard historical sources.

5.1.2.4 Aerial Photographs

Available aerial photographs dated 1939, 1947, 1953, 1963, 1971, 1974, 1979, 1980, 1985, 1989, 1994, 1996, 2001, 2005, 2009, 2010, 2012, 2014, 2016 and 2020 from Envirosite Corporation (Envirosite) were reviewed for this Phase 1 ESA. The photographs are discussed below.

Date: **1939**
Source: **USDA**
Description: The 1939 aerial photograph shows the subject property as vacant pastureland. The adjacent property to the northeast across West Mission Road and a railroad track appears to be vacant pastureland. The adjacent property to the southeast appears to be vacant pastureland. The adjacent property to the southwest across Capalina Road appears to be vacant pastureland. The adjacent property to the northwest appears to be vacant pastureland.

Date: **1947**
Source: **USDA**
Description: The 1947 aerial photograph showed no changes to the subject property or the adjoining properties as compared to the 1939 aerial photograph.

Date: **1953**
Source: **USDA**
Description: The 1953 aerial photograph showed no changes to the subject property or the adjoining properties as compared to the 1947 aerial photograph.

Date: **1963**
Source: **USDA**
Description: The 1963 aerial photograph shows the subject property as vacant pastureland. The adjacent property to the northeast across West Mission Road and a railroad track appears to be vacant pastureland. The adjacent property to the southeast appears to be vacant pastureland. The adjacent property to the southwest across Capalina Road appears to be developed with the existing mobile home park and vacant pastureland. The adjacent property to the northwest appears to be vacant pastureland.

Date: **1971**
Source: **USGS**
Description: The 1971 aerial photograph showed no changes to the subject property or the adjoining properties as compared to the 1963 aerial photograph.

Date: 1974
Source: USDA
Description: The 1974 aerial photograph shows the northwestern portion of the subject property as vacant, rough-graded land, and the remainder of the subject property as vacant pastureland. The adjacent property to the northeast across West Mission Road and a railroad track appears to be vacant pastureland. The adjacent property to the southeast appears to be developed with the existing multi-tenant commercial/retail building and the existing medical office building. The adjacent property to the southwest across Capalina Road appears to be developed with the existing mobile home park and vacant pastureland. The adjacent property to the northwest appears to be developed with a multi-tenant commercial/retail shopping center.

Date: 1979
Source: USGS
Description: The 1979 aerial photograph showed no changes to the subject property or the adjoining properties as compared to the 1974 aerial photograph.

Date: 1980
Source: USGS
Description: The 1980 aerial photograph shows the subject property as vacant, rough-graded land with what appears to be an area graded for use as a vehicle parking area on the southeastern portion of the subject property. The adjacent property to the northeast across West Mission Road and a railroad track appears to be vacant pastureland. The adjacent property to the southeast appears to be developed with the existing multi-tenant commercial/retail building and the existing medical office building. The adjacent property to the southwest across Capalina Road appears to be developed with the existing mobile home park and vacant land. The adjacent property to the northwest appears to be developed with a multi-tenant commercial/retail shopping center.

Date: 1985
Source: NHAP
Description: The 1985 aerial photograph showed no changes to the subject property or the adjoining properties as compared to the 1980 aerial photograph.

Date: 1989
Source: NAPP
Description: The 1989 aerial photograph showed no changes to the subject property or the adjoining properties as compared to the 1985 aerial photograph.

Date: 1994
Source: DOQ
Description: The 1994 aerial photograph shows the subject property as vacant, rough-graded land with what appears to be an area graded for use as a vehicle parking area on the southeastern portion of the subject property. The adjacent property to the northeast across West Mission Road, a railroad track and the Inland Rail Trail appears to be vacant land. The adjacent property to the southeast appears to be developed with the existing multi-tenant commercial/retail building and the existing medical office building. The adjacent property to the southwest across Capalina Road appears to be developed with the existing mobile home park and the existing church. The adjacent property to the northwest appears to be developed with a multi-tenant commercial/retail shopping center.

Date: 1996
Source: DOQ
Description: The 1996 aerial photograph shows the subject property as vacant, weed-abated land. The adjacent property to the northeast across West Mission Road, a railroad track and the Inland Rail Trail appears to be vacant land. The adjacent property to the southeast appears to be developed with the existing multi-tenant commercial/retail building and the existing medical office building. The adjacent property to the southwest across Capalina Road appears to be developed with the existing mobile home park and the existing church. The adjacent property to the northwest appears to be developed with a multi-tenant commercial/retail shopping center.

Date: 2001
Source: USDA
Description: The 2001 aerial photograph showed no changes to the subject property or the adjoining properties as compared to the 1996 aerial photograph.

Date: 2005
Source: NAIP
Description: The 2005 aerial photograph shows the subject property as vacant, weed-abated land with a vehicle parking area on the southeastern perimeter of the subject property. The adjacent property to the northeast across West Mission Road, a railroad track and the Inland Rail Trail appears to be vacant land. The adjacent property to the southeast appears to be developed with the existing multi-tenant commercial/retail building and the existing medical office building. The adjacent property to the southwest across Capalina Road appears to be developed with the existing mobile home park and the existing church. The adjacent property to the northwest

appears to be developed with a multi-tenant commercial/retail shopping center.

Date: **2009**
Source: **NAIP**
Description: The 2009 aerial photograph showed no changes to the subject property or the adjoining properties as compared to the 2005 aerial photograph.

Date: **2010**
Source: **NAIP**
Description: The 2010 aerial photograph showed no changes to the subject property or the adjoining properties as compared to the 2009 aerial photograph.

Date: **2012**
Source: **NAIP**
Description: The 2012 aerial photograph shows the subject property as vacant, weed-abated land. The adjacent property to the northeast across West Mission Road, a railroad track and the Inland Rail Trail appears to be vacant land. The adjacent property to the southeast appears to be developed with the existing multi-tenant commercial/retail building and the existing medical office building. The adjacent property to the southwest across Capalina Road appears to be developed with the existing mobile home park and the existing church. The adjacent property to the northwest appears to be developed with a multi-tenant commercial/retail shopping center.

Date: **2014**
Source: **NAIP**
Description: The 2014 aerial photograph showed no changes to the subject property or the adjoining properties as compared to the 2012 aerial photograph.

Date: **2016**
Source: **NAIP**
Description: The 2016 aerial photograph showed no changes to the subject property or the adjoining properties as compared to the 2014 aerial photograph.

Date: **2020**
Source: **NAIP**
Description: The 2020 aerial photograph showed no changes to the subject property or the adjoining properties as compared to the 2016 aerial photograph.

A copy of the reviewed historical aerial photographs is included in the appendix.

5.1.2.5 Fire Insurance Maps

Sanborn fire insurance maps were originally created in the late 1800s and early 1900s for assessing fire insurance liability in urbanized areas of the United States. These maps include detailed town and building information.

The Phase One Group reviewed Sanborn fire insurance maps available on-line from The Seattle Public Library's collection on March 23, 2022. Sanborn map coverage was not available for the subject property.

5.1.2.6 Historical City Directories

Historical city directories were not readily available at the time of the assessment. The historical use of the subject property was researched through other standard historical sources.

5.1.2.7 Building Permit Records

The Phase One Group contacted the City of San Marcos Development Services Department for building information on the subject property. No building permit records were found for the subject property.

5.1.2.8 Planning Records

The Phase One Group obtained information from the City of San Marcos Development Services Department for information on the subject property in order to identify Activity Use Limitations (AULs) associated with the subject property. According to records reviewed, the subject property is zoned MU-3 – Mixed-Use 3 – for mixed-use.

5.1.2.9 Other Maps

The Phase One Group performed a review of the Flood Insurance Rate Map, published by the Federal Emergency Management Agency. According to Community Panel Number 06073C 0789H, dated May 16, 2012, the subject property appears to be located in Zone X, defined as an area of minimal flood hazard.

The Phase One Group researched the State of California Department of Conservation, Division of Oil, Gas and Geothermal Resources (DOGGR), DOGGR Online Mapping System (http://maps.conservation.ca.gov/doms) for information regarding oil and gas development. According to the DOGGR Online Mapping System, no oil or gas wells are located on or adjacent to the subject property.

5.1.3 Properties and Areas Surrounding the Property

5.1.3.1 Current Uses of Adjoining Properties

The current use of adjoining properties was observed from the subject property as follows:

Northeast	West Mission Road, followed by the North San Diego County Transit Sprinter Hybrid Rail railroad track, Indian Rail Trail, and vacant land (no address identified)
Southeast	Multi-tenant commercial/retail building (1605 West Mission Road) and a medical office building (1560 Capalina Road)
Southwest	Capalina Road, followed by El Dorado Mobil Home Park (1515 Capalina Road) and The Movement Church (1609 Capalina Road)
Northwest	Remnants of a multi-tenant commercial/retail shopping center (225-245 North Rancho Santa Fe Road)

5.1.3.2 Past Uses

Based on a review of the historical aerial photographs, the adjacent properties were historically vacant pastureland prior to the development of the current improvements.

5.1.3.3 Current Use of Surrounding Areas

The subject property is located in a mixed commercial/retail and residential area of the City of San Marcos. None of the adjacent properties are expected to have posed an environmental concern to the subject property.

5.2 ENVIRONMENTAL RECORDS REVIEWS

5.2.1 Mapped Database Records Search

Information from standard federal and state environmental record sources is provided through Envirosite Corporation (Envirosite). Data from governmental agency lists are updated and integrated into one database, which is updated as these data are released. This integrated database also contains postal service data in order to enhance address matching. Records from one government source are compared to records from another to clarify any address ambiguities. The demographic and geographic information available provides assistance in identifying and managing risk. The accuracy of the geocoded locations is approximately +/- 300 feet. Based on the review of the unmappable sites, none of these sites are within the prescribed search radii.

The subject property is not listed in the Envirosite Corporation (Envirosite) environmental database report.

The adjacent property to the southeast, 1560 Capalina Road, is listed as a CalEPA Site and HAZMAT San Diego County site on the Envirosite environmental database report. However, based on the current regulatory statuses of the adjacent properties, the adjacent properties are not expected to represent a significant environmental concern to the subject property.

Federal NPL

The National Priorities List (NPL) is the Environmental Protection Agency (EPA) database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund Program.

No NPL sites are located within one mile of the subject property.

Federal CERCLIS List

The Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) list is a compilation of sites that the EPA has investigated or is currently investigating for a release or threatened release of hazardous substances.

No CERCLIS sites are listed within one-half mile of the subject property.

Federal CERCLIS NFRAP Sites List

The CERCLIS No Further Remedial Action Planned (NFRAP) List is a compilation of sites that the EPA has investigated, and has determined that the facility does not pose a threat to human health or the environment, under the CERCLA framework.

One CERCLIS NFRAP site is listed within one-half mile of the subject property. However, based on the relative distance, regulatory status, and/or inferred direction of groundwater flow, the listed site is not expected to represent a significant environmental concern.

Federal Resource Conservation and Recovery Act (RCRA) CORRACTS TSD Facilities List

The EPA Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Treatment, Storage and Disposal (TSD) database is a compilation by the EPA of reporting facilities that treat, store or dispose of hazardous waste. The Corrective Action Sites (CORRACTS) database is the EPA's list of treatment storage or disposal facilities subject to corrective action under RCRA.

One RCRA CORRACTS TSD site is listed within one mile of the subject property. However, based on the relative distance, regulatory status, and/or inferred direction of

groundwater flow, the listed site is not expected to represent a significant environmental concern.

Federal Resource Conservation and Recovery Act (RCRA) Non-CORRACTS TSD Facilities List

The RCRA TSD database is a compilation by the EPA of reporting facilities that treat, store or dispose of hazardous waste.

No RCRA TSD sites are listed within one-half mile of the subject property.

Federal RCRA Generator List

The RCRA program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators database is a compilation by the EPA of reporting facilities that generate hazardous waste.

No RCRA Generator facilities are listed on the subject property or adjacent to the subject property.

Federal Institutional Controls/Engineering Controls (IC/EC)

The Federal IC/EC database is designed to assist the EPA in collecting, tracking, and updating information, as well as reporting on the major activities and accomplishments of the various Brownfield grant programs. The IC/EC sites are superfund sites that have either engineering or an institutional control in place. The data includes the control and the media contaminated.

No Federal IC/EC sites were found within one-half mile of the subject property.

Federal Emergency Response Notification System (ERNS)

The Emergency Response Notification System (ERNS) is a national database used to collect information or reported release of oil or hazardous substances.

No ERNS sites were listed on the subject property or on the adjacent properties.

Tribal Lands

The Tribal Lands database consists of areas with boundaries established by treaty, statute, and/or executive or court order, recognized by the Federal Government as territory in which American Indian tribes have primary governmental authority. The Indian Lands of the United States map layer shows areas of 640 acres or more, administered by the Bureau of Indian Affairs. Included are Federally-administered lands within a reservation which may or may not be considered part of the reservation.

No Tribal Land sites were found within one-mile of the subject property.

State/Tribal Sites

The State of California Environmental Protection Agency, Department Toxic Substances Control (DTSC) maintains a State Priority List (SPL) of sites considered to be actually or potentially contaminated and a State CERCLIS-equivalent list (SCL) (ENVIROSTOR) of sites under investigation that could be actually or potentially contaminated and presenting a possible threat to human health and the environment.

No SPL sites and a total of five SCL (ENVIROSTOR) sites are listed within one-mile of the subject property. However, based on the relative distance, regulatory status, and/or inferred direction of groundwater flow, the listed sites are not expected to represent a significant environmental concern.

Solid Waste/Landfill Facilities (SWLF)

A database of Solid Waste/Landfill Facilities (SWF/LF) is prepared by California Integrated Waste Management Board.

One SWF/LF facility is listed within one-half mile of the subject property. However, based on the relative distance, regulatory status, and/or inferred direction of groundwater flow, the listed site is not expected to represent a significant environmental concern.

State/Tribal Leaking Underground Storage Tank List (LUST)

The California Regional Water Quality Control Board compiles lists of all leaks of hazardous substances from underground storage tanks, identified as Leaking Underground Storage Tank (LUST) facilities.

A total of 10 LUST facilities are identified within one-half mile of the subject property. However, based on the relative distance, regulatory status, and/or inferred direction of groundwater flow, the listed sites are not expected to represent a significant environmental concern.

State/Tribal Underground Storage Tank/Aboveground Storage Tank List (UST/AST)

The California Regional Water Quality Control Board compiles a list of underground storage tank (UST) and aboveground storage tank (AST) locations.

No UST or AST facilities are listed on the subject property or on the adjacent properties.

State/Tribal VCP Sites

The California Department of Toxic Substances Control compiles a list of Voluntary Cleanup Program (VCP) sites. This list contains low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC

oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

No State/Tribal VCP sites were found within one-half mile of the subject property.

State/Tribal Brownfields Sites

The California Department of Toxic Substances Control has developed an electronic database system with information about sites that are known to be contaminated with hazardous substances as well as information on uncharacterized properties where further studies may reveal problems. The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), also known as CalSites, is used primarily by DTSC's staff as an informational tool to evaluate and track activities at properties that may have been affected by the release of hazardous substances.

No State/Tribal Brownfields sites were found within one-half mile of the subject property.

SLIC Sites

The Spills, Leaks, Investigations and Cleanup (SLIC) program, managed by the California Regional Water Quality Control Board, is designed to protect and restore water quality from spills, leaks and similar discharges. This list includes sites that have recorded spills, leaks, investigations, and cleanups.

A total of five SLIC sites are listed within one-half mile of the subject property. However, based on the relative distance, regulatory status, and/or inferred direction of groundwater flow, the listed sites are not expected to represent a significant environmental concern.

DRYCLEANERS Sites

The California EPA maintains a list of registered dry cleaning facilities.

Two DRYCLEANERS sites are listed within one-fourth mile of the subject property. However, based on the relative distance, regulatory status, and/or inferred direction of groundwater flow, the listed sites are not expected to represent a significant environmental concern.

HAZMAT San Diego County Sites

The HAZMAT San Diego County listing is a list of hazardous material permitted facilities in San Diego County.

The subject property is not listed as a HAZMAT San Diego County site. One adjoining property is listed as a HAZMAT San Diego County site and are discussed below:

- Capalina Clinic, at 1560 Capalina Road, is located adjacent to the southeast side of the subject property. According to the environmental database report, this site is

identified as a "United Program Facility Permit" site. No violations are reported. Based on the current regulatory status, this site is not expected to represent a significant environmental concern to the subject property.

CalEPA Sites

CalEPA regulated sites (CalEPA Sites) are sites from the Certified United Program Agencies (CUPA).

The subject property is not listed as a CalEPA Site. One adjoining property is listed as a CalEPA Sites and is discussed below:

- Capalina Clinic, at 1560 Capalina Road, is located adjacent to the southeast side of the subject property. According to the environmental database report, this tenant is listed as a "Chemical Storage Facility" site. No violations are reported. Based on the current regulatory status, this site is not expected to represent a significant environmental concern to the subject property

Unmappable Listings

A total of 10 unmappable listings are identified in the regulatory database report. However, based on the relative distance, regulatory status, and/or inferred direction of groundwater flow, the listed sites are not expected to represent a significant environmental concern.

5.2.2 Vapor Encroachment Screening

ASTM defines a vapor encroachment condition (VEC) as the presence or likely presence of vapors from chemicals of concern (COC) in the subsurface of a property caused by the release of vapors on or near the subject property. As a "Tier 1" vapor encroachment screening, The Phase One Group reviewed information obtained during the Phase I ESA, including the environmental database, visual observations of adjacent and nearby properties, geology, groundwater depth and flow direction, interviews of knowledgeable persons, and known sources of contamination in the nearby vicinity to evaluate the likelihood of a VEC in connection with the subject property. This information indicates there are no known active sources of contamination within 500 feet of the subject property, or large quantity generators of waste containing potential COC within 200 feet. Based on the results of this Tier 1 screening, it appears reasonable to conclude that a VEC can be ruled out for the subject property.

5.2.3 Local Regulatory Review

5.2.3.1 Fire Department

Records from the City of San Marcos Fire Department were requested for evidence indicating the presence of underground storage tanks (USTs) and for the use of hazardous materials.

No records were on-file for the subject property.

5.2.3.2 Health Department

Records from the San Diego County Department of Environmental Health (SDCDEH) were requested for evidence indicating the presence of underground storage tanks (USTs) and for the use of hazardous materials.

No records were on-file for the subject property.

5.2.3.3 Air Quality Management District

The Phase One Group researched the San Diego Air Pollution Control District (SDAPCD) records via the San Diego County website (www.sandiegocounty.gov) for information regarding any Permits to Operate (PTO), Notices of Violation (NOV), or Notices to Comply (NTC) records for the subject property related to air emission equipment, which may include dry cleaning machines and underground storage tanks.

No PTOs, NOVs, NTCs or the presence of AULs were on-file for the subject property with the SDAPCD.

5.2.3.4 California Regional Water Quality Control Board

The Phase One Group researched the California Regional Water Quality Control Board (CRWQCB) online database (GeoTracker) for information regarding any releases to the subsurface which may have impacted or threatened a body of water.

No records regarding a release or the presence of AULs on the subject property were on-file with the CRWQCB.

5.2.3.5 Department of Toxic Substances Control

The Phase One Group researched the Department of Toxic Substances Control (DTSC) online database (EnviroStor) for the subject property. These records may contain evidence indicating current and/or historical hazardous materials usage, storage or releases.

No records regarding a release or the presence of AULs on the subject property were on file with the DTSC.

5.2.3.6 Assessor's Office

According to the San Diego County Assessor, the subject property consists of one parcel of land totaling approximately 2.510-acres in size, identified by the San Diego County Assessor as Assessor's Parcel Number (APN) 219-115-33-00. The

current subject property owner is identified as Saba Family Trust 07-24-18, who has owned the subject property since August 2, 2019.

A copy of the reviewed records is included in the appendix.

6.0 RECONNAISSANCE AND INTERVIEWS

The subject property was inspected by Mark E. Smith, Environmental Professional, a representative of The Phase One Group, on March 23, 2022. The weather at the time of the site visit was sunny and approximately 80 degrees Fahrenheit. At the time of The Phase One Group's site visit, the subject property was unoccupied. No evidence of the use of reportable quantities of hazardous materials and petroleum products or the generation of hazardous waste was observed on the subject property during the site visit.

6.1 PROPERTY CHARACTERISTICS

6.1.1 Topography

The United States Geological Survey (USGS), San Marcos, California Quadrangle 7.5-minute series topographic map was reviewed for this ESA. This map was published by the Geological Survey in 1983. According to the contour lines on the topographic map, the subject property is located approximately 583 feet above Mean Sea Level (msl). The contour lines in the area of the subject property slopes gently to the east. The subject property is depicted on the map as undeveloped.

6.1.2 Potable Water Supply

According to available information, a public water system operated by the Vallecitos Water District serves the subject property vicinity. According to a representative of the Vallecitos Water District, shallow groundwater beneath the subject property is not utilized for domestic purposes. The source of public water for the Vallecitos Water District is water purchased from the San Diego County Water Authority (SDCWA). According to the Vallecitos Water District 2020 Water Quality Report, water supplied to the subject property is in compliance with all State and Federal regulations pertaining to drinking water standards, including lead and copper. Water sampling was not conducted to verify water quality.

6.1.3 Solid Waste Disposal

The subject property was unoccupied and no buildings were observed on-site at the time of The Phase One Group's site visit. No evidence of solid waste disposal collection service was observed on-site. No evidence of the use of reportable quantities of hazardous materials and petroleum products or the generation of hazardous waste was observed on the subject property during the site visit.

During The Phase One Group's site visit, several small piles of what appeared to be construction debris in the form of large rocks were observed along the northwestern portion of the subject property. The observed piles of construction debris are not expected to represent a significant environmental concern to the subject property.

6.1.4 Sewage Discharge and Disposal

The subject property area is serviced by the City of San Marcos. No evidence of on-site septic tanks or septic systems was noted.

6.1.5 Surface Water Drainage

Surface water drainage from the subject property is via sheet flow throughout the subject property to curb and gutter systems along the surrounding streets.

6.1.6 Source of Heating and Cooling

The subject property was unoccupied and no structures were observed on-site at the time of The Phase One Group's site visit. No evidence of heating or cooling equipment was observed on-site.

6.1.7 Wells and Cisterns

No evidence of wells or cisterns was observed on the subject property.

6.1.8 Current Occupants

At the time of The Phase One Group's site visit, the subject property was unoccupied. No evidence of the use of reportable quantities of hazardous materials and petroleum products or the generation of hazardous waste was observed on the subject property during the site visit.

6.2 POTENTIAL ENVIRONMENTAL HAZARDS

6.2.1 Hazardous Materials and Petroleum Products

The on-site reconnaissance addressed hazardous materials and petroleum products utilized on the subject property. No evidence of the use of reportable quantities of hazardous materials and petroleum products was observed at the subject property. No indication of potential hazardous material disposal was noted during the site visit.

6.2.2 Labeled Drums and Containers

The on-site reconnaissance addressed labeled drums and containers located on the subject property. No evidence of drums and containers of hazardous materials or hazardous waste were observed at the subject property.

6.2.3 Unlabeled Containers and Drums

The on-site reconnaissance addressed unlabeled containers located on the subject property. No evidence of unlabeled containers or drums was observed at the subject property.

6.2.4 Disposal Locations

The on-site reconnaissance addressed unlabeled containers located on the subject property. No evidence of unlabeled containers or drums was observed at the subject property.

6.2.5 Evidence of Releases

No evidence of a release or spill was observed at the subject property.

6.2.6 Stressed Vegetation/Stained Soils

No evidence of stressed vegetation or stained soils was observed at the subject property.

6.2.7 Strong, Pungent or Noxious Odors

No evidence of strong, pungent or noxious odors was identified at the subject property.

6.2.8 Polychlorinated Biphenyl's (PCBs)

Older transformers and other electrical equipment could contain PCBs at a level that subjects them to regulation by the U.S. EPA. PCBs in electrical equipment are controlled by United States Environmental Protection Agency regulations 40 CFR, Part 761. Under the regulations, there are three categories into which electrical equipment can be classified: 1) Less than 50 parts per million (ppm) of PCBs – "Non-PCB;" 2) 50 ppm-500 ppm – "PCB-Contaminated;" and, 3) Greater than 500 ppm – "PCB-Containing." The manufacture, process, or distribution in commerce or use of any PCB in any manner other than in a totally enclosed manner was prohibited after January 1, 1977.

The on-site reconnaissance addressed indoor and outdoor transformers that may contain PCBs. No evidence of on-site transformers was observed at the subject property.

No additional potential PCB-containing equipment (oil-filled switches, hoists, lifts, dock levelers, hydraulic elevators, etc.) was observed on the subject property.

6.2.9 Sumps, Drywells, Catchbasins or Clarifiers

No evidence of sumps, drywells, catchbasins or clarifiers was found on the subject property.

6.2.10 Pits, Ponds or Lagoons

No evidence of pits, ponds or lagoons was observed at the subject property.

6.2.11 Groundwater Wells

No evidence of groundwater wells was observed or reported at the subject property.

6.2.12 Oil Wells/Pipelines

No evidence of oil wells or pipelines was observed or reported at the subject property.

6.2.13 Imported Fill

No information related to the use of imported fill material was identified in records for the subject property.

6.2.14 On-Site ASTs and USTs

No evidence of aboveground storage tanks (ASTs) or underground storage tanks (USTs) was identified on-site during the site visit.

6.2.15 Radiological Hazards

No evidence of radiological substances or equipment was stored on the subject property.

6.2.16 Additional Hazard Observations

No additional hazards were observed on the subject property.

6.2.17 Asbestos

Asbestos is the name given to a number of naturally occurring, fibrous silicate minerals mined for their useful properties such as thermal insulation, chemical and thermal stability, and high tensile strength. The Occupational Safety and Health Administration (OSHA) regulation 29 CFR 1926.1101 requires certain construction materials to be presumed to contain asbestos, for purposes of this regulation. All thermal system insulation (TSI), surfacing material, and asphalt/vinyl flooring that are present in a building constructed prior to 1981 and have not been appropriately tested are "presumed asbestos-containing material" (PACM).

The subject property was unoccupied and no structures were observed on-site at the time of The Phase One Group's site visit. As such, an asbestos evaluation was not performed.

6.2.18 Lead-Based Paint

Lead is a highly toxic metal that affects virtually every system of the body. LBP is defined as any paint, varnish, stain, or other applied coating that has 1 mg/cm2 (or 5,000 ug/g or 0.5% by weight) or more of lead. Congress passed the Residential Lead-Based Paint Hazard Reduction Act of 1992, also known as "Title X", to protect families from exposure to lead from paint, dust, and soil. Under Section 1017 of Title X, intact LBP on most walls and ceilings is not considered a "hazard," although the condition of the paint should be monitored and maintained to ensure that it does not become deteriorated. Further, Section 1018 of this law directed the Housing and Urban Development (HUD) and the US EPA to require the disclosure of known information on LBP and LBP hazards before the sale or lease of most housing built before 1978.

The subject property was unoccupied and no structures were observed on-site at the time of The Phase One Group's site visit. As such, a lead-based paint evaluation was not performed.

6.2.19 Radon

Radon is a colorless, odorless, naturally occurring, radioactive, inert and gaseous element formed by radioactive decay of radium (Ra) atoms. The USEPA has prepared a map to assist National, State, and local organizations to target their resources and to implement radon-resistant building codes. The map divides the country into three Radon Zones; Zone 1 being those areas with the average predicted indoor radon concentration in residential dwellings exceeding the US EPA Action Limit of 4.0 picoCuries per Liter (pCi/L). It is important to note that the EPA has found homes with elevated levels of radon in all three zones, and the US EPA recommends site-specific testing in order to determine radon levels at a specific location. However, the map does give a valuable indication of the propensity of radon gas accumulation in structures.

Radon sampling was not conducted as part of this assessment. Review of the US EPA Map of Radon Zones places the subject property in Zone 3, where average predicted radon levels are less than 2.0 pCi/L.

Based upon the radon zone classification, radon is not considered to be a significant environmental concern.

6.2.20 Water Intrusion and Mold Growth

The Phase One Group performed a limited visual inspection for the conspicuous presence of mold in the subject property buildings. The Phase One Group inspected the accessible interior areas of the subject property building, including walls and ceilings, common mechanical/electrical closets, areas under sinks and around windows and exterior doors for the presence of conspicuous mold or observed water intrusion or accumulation.

The subject property was unoccupied and no structures were observed on-site at the time of The Phase One Group's site visit. As such, a mold evaluation was not performed.

6.3 INTERVIEWS

Interviews were conducted with the following individuals. Findings from these interviews are discussed in the appropriate sections in this report.

6.3.1 Property

- Kevin Fortuna, property owner representative, 949.291.6493

6.3.2 Surrounding Area

- N/A

6.3.3 Regulatory Agency Officials

- City of San Marcos Development Services Department
- City of San Marcos Fire Department
- San Diego County Assessor
- San Diego County Department of Environmental Health (SDCDEH)
- San Diego Air Pollution Control District (SDAPCD)
- Department of Toxic Substances Control (DTSC)
- California Regional Water Quality Control Board (CRWQCB)
- South Coast Air Quality Management District (SCAQMD)
- State of California Department of Conservation, Division of Oil, Gas and Geothermal Resources (DOGGR), DOGGR Online Mapping System

6.4 ADDITIONAL SERVICES

No additional services were performed with this scope of work.

7.0 CONCLUSIONS AND RECOMMENDATIONS

7.1 CONCLUSIONS

The Phase One Group has performed a Phase 1 Environmental Site Assessment in conformance with the scope and limitations of ASTM Standard E1527-13 of the Vacant Property located at the northeast side of Capalina Road, APN 219-115-33-00 (unaddressed), in the City of San Marcos, San Diego County, California 92069 (the "subject property"). Any exceptions to or deletions from this practice are described in Section 2.0 of this report. This assessment has revealed no evidence of recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), controlled recognized environmental conditions (CRECs) or environmental issues in connection with the subject property.

7.2 RECOMMENDATIONS

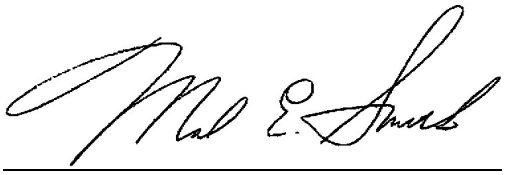
As a result of this assessment, The Phase One Group does not recommend further investigation of the subject property at this time.

This summary is not to be used alone. This report must be read in its entirety.

8.0 CONSULTANT INFORMATION

8.1 SIGNATURE PAGE

By signing below, The Phase One Group declares that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR §312. The Phase One Group has the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. The Phase One Group has developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.



Mark E. Smith, Environmental Professional

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description : The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Citation : 22 CCR 15 66265.192(a) - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.192(a)

Description :

Failure to obtain and maintain a written assessment reviewed and certified by an independent, qualified, professional engineer prior to placing the tank system in service. The written assessment shall state that, the new hazardous waste tank system has sufficient structural integrity, is acceptable for the transferring, storing and treating of hazardous waste, and that the tanks and containment system including the foundation, structural support, seams, connections, and pressure controls (if applicable) are suitably designed to meet the regulation.

Source Description

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).
The UORS is managed by the California Waste Management Board (CIWMB). The CIWMB helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

CASE LIST_SAN DIEGO COUNTY - CA ***(cont.)***

Site History :

The Site is located on the southwestern corner of the intersection of South Rancho Santa Fe Road and Grand Avenue in San Marcos, California. The Site was a former gasoline station but is currently occupied by a convenience store. In December 1999, two 10,000-gallon USTs and associated dispenser island and product lines were removed from the site. Liquid-phase hydrocarbons (LPH) and groundwater were observed in the UST cavity at approximately 10 feet below ground surface (bgs). Approximately 175 gallons of LPH and groundwater were removed from the excavation. Soil samples collected beneath the dispenser and stockpiles contained maximum concentrations of total petroleum hydrocarbons as gasoline (TPHg), benzene, and methyl tert-butyl ether (MTBE) of 2,800 milligrams per kilogram (mg/kg), 17 mg/kg, and 140 mg/kg, respectively. Based on observations in the field, Unauthorized Release Case H04763-001 was opened. On March 14 and 15, 2011, six temporary soil gas probes (SGP-1 through SGP-6) were installed. In March and April 2011, soil gas samples were collected from soil gas probes SGP-1 through SGP-6. The highest contaminant concentrations were detected in the March 30, 2011 sample collected from SGP-5. TPHg and BTEX were detected at concentrations of up to 4,200 parts per million by volume (ppmv), 0.18 ppmv, 1.3 ppmv, 1.7 ppmv, and 6.0 ppmv, respectively. MTBE was also detected, at concentrations of up to 2.0 ppmv, while naphthalene was not detected in any of the soil gas samples. URS utilized the soil vapor analytical data to complete SAM Level 1 Vapor Risk Assessment models for the analyzed constituents. The risk models indicated that there is no significant health risk to occupants in the commercial building present on the western portion of the property. DEH concurred with this conclusion in a letter dated July 7, 2011. Between September 12 and 14, 2012, DPE wells DPE-3 through DPE-5 and injection wells IP-2 through IP-4 and IP-8 were installed. The injection wells were subsequently utilized for an injection feasibility test; the results of which suggested the injection of liquid-phase oxidants into the subsurface beneath the site is not feasible. In July and August 2015, approximately 2,858 tons of petroleum hydrocarbon-impacted soil centered in the area of the former UST basin were excavated. The excavated area was approximately 51 feet by 33.5 feet and extended to a depth of approximately 27 feet bgs. The clean backfill was amended with 1,560 pounds of ORC Advanced« that was mixed in the backfill material emplaced at a depth of 10 to 20 feet bgs. Following excavation activities in the former UST basin, confirmation sampling indicated that residual soil contamination still exists in the former UST basin at depths greater than 27 feet bgs. Based on concentrations greater than 100 mg/kg, the amount of hydrocarbon impacted soil for the entire Site is conservatively estimated at approximately 3,775 pounds. As requested by the DEH, periodic removal of liquid phase hydrocarbons (LPH) in well MW-7, including the installation of a passive skimmer, commenced in April 2016. Due to the rapidly declining LPH thicknesses in well MW-7, the skimmer was removed on September 23, 2016. Monthly monitoring of LPH thicknesses in well MW-7 were performed through January 2017. LPH is no longer present in well MW-7. Based on the trend analysis data, the well with the longest estimated time to reach the benzene MCL is 84 years and the well with the longest estimated time to reach the MTBE MCL is 12 years to reach the primary MCL of 13 parts per billion (ppb) and 13 years to reach the secondary MCL of 5 ppb. Remediation by Natural Attenuation (RNA) is currently active in remediating hydrocarbons present at the Site. The Site poses no significant risk to human health and meets the requirements of the Low-Threat UST Case Closure Policy. The case was evaluated under the StateÆs Low-Threat Underground Storage Tank Case Closure Policy (the Policy). Current and historical soil and groundwater data indicate that the secondary source has been adequately removed and a stable to decreasing plume remains. DEH concurs that the case qualifies for a low-risk closure designation. Public notification was completed per the Policy. All monitoring wells associated with the case were destroyed under permit DEH2019-LMWP-003881. The closure of the case is based on the current use of the property as a store and active service station. ANY CONTAMINATED SOIL EXCAVATED AS PART OF SUBSURFACE CONSTRUCTION WORK MUST BE MANAGED IN ACCORDANCE WITH THE LEGAL REQUIREMENTS AT THAT TIME.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Site Details

Status Date :	2021-12-07
Status :	Completed - Case Closed
Begin Date :	1998-08-20
Global ID :	T0607302478

Site History :

Gasoline contaminated soil was discovered during a Phase II Environmental Assessment conducted in 1998. Thirteen soil borings were drilled and soil samples were collected as part of the Phase II investigation. Total petroleum hydrocarbons as gasoline (TPHg)were detected at 1,000 mg/kg and BTEX and MTBE were also detected in soil samples. Groundwater monitoring wells were installed in 2000. TPHg, BTex and MTBE at 1,000 ug/l were detected in groundwater samples. See Environmental Data Tab for additional information.

Site History :

Gasoline contaminated soil was discovered during a Phase II Environmental Assessment conducted in 1998. Thirteen soil borings were drilled and soil samples were collected as part of the Phase II investigation. Total petroleum hydrocarbons as gasoline (TPHg)were detected at 1,000 mg/kg and BTEX and MTBE were also detected in soil samples. Groundwater monitoring wells were installed in 2000. TPHg, BTex and MTBE at 1,000 ug/l were detected in groundwater samples. See Environmental Data Tab for additional information.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Site History :

The Site is an active gasoline station and mini-market at 125 North Ranch Santa Fe Road in San Marcos, California. Station facilities consist of four underground storage tanks (USTs), two dispenser islands, a building, parking, and a landscaped area (southern portion of the Site). The USTs, associated dispensers and product piping were replaced in October 1993 and the dispensers and product piping were replaced again in November 2003. Based on the results of soil sampling, Unauthorized Release Case H05181-004 was opened. Soil removed during the 1993 UST removal was placed back in the excavation area for future remediation. In addition, soil was excavated for the current UST area, which is adjacent and to the west of the former USTs. Most of the soil removed was transported off-site for disposal, but 80-100 cubic yards of soil removed between 5 and 15 feet bgs from the southern portion of the current UST area was reportedly used to complete backfilling the former UST area. A total of approximately 1,100 cubic yards (1,479 tons) of soil have been removed from the Site to date. Measurable free product have previously been reported in wells MW-1, MW-2, MW-3, MW-6 and MW-8. LPH was last reported in well MW-1 (sheen detected during well purging) in May 2008. Approximately 132 gallons of LPH have been reportedly removed from

Site wells to date using a vacuum truck, petro trap and rubberizer boom, and by hand bailing. An unknown amount has been removed from the use of absorbent socks, previous remedial system operation, and 2003 high vacuum dual-phase extraction (HVDPE) feasibility testing. In March 2011, extraction well EW-1 and injection wells IW-1, IW-2, IW-3 were installed, for use during the feasibility testing. From September 13 through 16, 2011, an in situ chemical oxidation (ISCO) test was conducted, which involved the injection of approximately 1,436 gallons of a 12% solution of sodium persulfate, approximately 15.5 gallons of a 6% solution of hydrogen peroxide into IW-1, IW-2 and IW-3, and approximately 20.5 gallons of a 3% solution of hydrogen peroxide into wells IW-1 and IW-3. The high vacuum dual-phase extraction (HVDPE) testing involved three events that were performed during three consecutive months, utilizing EW-1 for extraction. A 117-hour event was performed in November, a 90-hour HVDPE event in December 2011 and a 90-hour event in January 2012, resulting in the removal of a total of approximately 2,190 gallons of groundwater and 26 pounds of gasoline range organics (GRO) as vapor. In August 2003, a CAP was submitted, recommending soil vapor extraction (SVE), followed by remediation by natural attenuation (RNA) as the most cost-effective remedial action for the Site. In January 2004, a SVE system was installed at the Site and operation began. Due to asymptotic vapor concentrations from source wells, SECOR discontinued system operation in January 2006. The system removed and treated approximately 2,762 pounds of GRO (also reported as volatile fuel hydrocarbons in previous reports), 1.34 pounds of benzene and 2.9 pounds of MTBE from wells VE-1, VE-2, MW-1, MW-2, MW-3, MW-4, MW-8, and MW-9. In June 2008, four vapor points were installed around the station building, as part of a vapor risk assessment (VRA). Based on the soil vapor sample data, none of the analyzed VOCs that were listed in the VRA model were detected at or above laboratory reporting limits. The excess cancer risk to workers and customers in the existing or possible future buildings on the site was determined to be less than the one-in-a-million level. In March 2003, a high-vacuum dual-phase extraction (HVDPE) feasibility testing was performed using a mobile remediation system. A 24-hour test was performed using MW-2 as the extraction well and a 23-hour test was performed using MW-3 as the extraction well. Based on the testing data, HVDPE appeared to be an effective method to remove subsurface hydrocarbons beneath the site, but the groundwater recovery was slow and inconsistent. Approximately 400 gallons of fluids and 273 pounds of hydrocarbons as vapor were removed during testing, with an average groundwater removal rate of 0.14 gallons per minute (per well). Evaluation of benzene and MTBE concentration trends using linear regression trend lines, consideration of decreasing average benzene and MTBE concentrations, and BIOSCREEN modeling provide converging lines of evidence that RNA is occurring at the site and benzene and MTBE concentrations will reach MCLs through RNA processes. Estimates of the time needed for benzene and MTBE to reach MCLs (derived from estimates based on BIOSCREEN) are less than 50 years for benzene and less than 25 years for MTBE. These appear to correlate well with the estimates for near-source area wells MW-1 and MW-3 from linear regression trend lines with benzene ranging from 6 to 49 years, and MTBE ranging from <1 to 24 years. Based on the pounds of hydrocarbons removed during SVE and the HVDPE test, the estimated hydrocarbon mass remaining in soil is 2,075 pounds.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Site History :

The Site is an active gasoline station and mini-market at 125 North Ranch Santa Fe Road in San Marcos, California. Station facilities consist of four underground storage tanks (USTs), two dispenser islands, a building, parking, and a landscaped area (southern portion of the Site). The USTs, associated dispensers and product piping were replaced in October 1993 and the dispensers and product piping were replaced again in November 2003. Based on the results of soil sampling, Unauthorized Release Case H05181-004 was opened. Soil removed during the 1993 UST removal was placed back in the excavation area for future remediation. In addition, soil was excavated for the current UST area, which is adjacent and to the west of the former USTs. Most of the soil removed was transported off-site for disposal, but 80-100 cubic yards of soil removed between 5 and 15 feet bgs from the southern portion of the current UST area was reportedly used to complete backfilling the former UST area. A total of approximately 1,100 cubic yards (1,479 tons) of soil have been removed from the Site to date. Measurable free product have previously been reported in wells MW-1, MW-2, MW-3, MW-6 and MW-8. LPH was last reported in well MW-1 (sheen detected during well purging) in May 2008. Approximately 132 gallons of LPH have been reportedly removed from Site wells to date using a vacuum truck, petro trap and rubberizer boom, and by hand bailing. An unknown amount has been removed from the use of absorbent socks, previous remedial system operation, and 2003 high vacuum dual-phase extraction (HVDPE) feasibility testing. In March 2011, extraction well EW-1 and injection wells IW-1, IW-2, IW-3 were installed, for use during the feasibility testing. From September 13 through 16, 2011, an in situ chemical oxidation (ISCO) test was conducted, which involved the injection of approximately 1,436 gallons of a 12% solution of sodium persulfate, approximately 15.5 gallons of a 6% solution of hydrogen peroxide into IW-1, IW-2 and IW-3, and approximately 20.5 gallons of a 3% solution of hydrogen peroxide into wells IW-1 and IW-3. The high vacuum dual-phase extraction (HVDPE) testing involved three events that were performed during three consecutive months, utilizing EW-1 for extraction. A 117-hour event was performed in November, a 90-hour HVDPE event in December 2011 and a 90-hour event in January 2012, resulting in the removal of a total of approximately 2,190 gallons of groundwater and 26 pounds of gasoline range organics (GRO) as vapor. In August 2003, a CAP was submitted, recommending soil vapor extraction (SVE), followed by remediation by natural attenuation (RNA) as the most cost-effective remedial action for the Site. In January 2004, a SVE system was installed at the Site and operation began. Due to asymptotic vapor concentrations from source wells, SECOR discontinued system operation in January 2006. The system removed and treated approximately 2,762 pounds of GRO (also reported as volatile fuel hydrocarbons in previous reports), 1.34 pounds of benzene and 2.9 pounds of MTBE from wells VE-1, VE-2, MW-1, MW-2, MW-3, MW-4, MW-8, and MW-9. In June 2008, four vapor points were installed around the station building, as part of a vapor risk assessment (VRA). Based on the soil vapor sample data, none of the analyzed VOCs that were listed in the VRA model were detected at or above laboratory reporting limits. The excess cancer risk to workers and customers in the existing or possible future buildings on the site was determined to be less than the one-in-a-million level. In March 2003, a high-vacuum dual-phase extraction (HVDPE) feasibility testing was

performed using a mobile remediation system. A 24-hour test was performed using MW-2 as the extraction well and a 23-hour test was performed using MW-3 as the extraction well. Based on the testing data, HVDPE appeared to be an effective method to remove subsurface hydrocarbons beneath the site, but the groundwater recovery was slow and inconsistent. Approximately 400 gallons of fluids and 273 pounds of hydrocarbons as vapor were removed during testing, with an average groundwater removal rate of 0.14 gallons per minute (per well). Evaluation of benzene and MTBE concentration trends using linear regression trend lines, consideration of decreasing average benzene and MTBE concentrations, and BIOSCREEN modeling provide converging lines of evidence that RNA is occurring at the site and benzene and MTBE concentrations will reach MCLs through RNA processes. Estimates of the time needed for benzene and MTBE to reach MCLs (derived from estimates based on BIOSCREEN) are less than 50 years for benzene and less than 25 years for MTBE. These appear to correlate well with the estimates for near-source area wells MW-1 and MW-3 from linear regression trend lines with benzene ranging from 6 to 49 years, and MTBE ranging from <1 to 24 years. Based on the pounds of hydrocarbons removed during SVE and the HVDPE test, the estimated hydrocarbon mass remaining in soil is 2,075 pounds.

Source Description

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Site History :

An underground storage tank was damaged during well installation activities resulting in a subsurface release of approximately 3,200 gallons of unleaded gasoline. Contaminated soil was discovered during the removal of the waste oil tank in April 1991, and the gasoline underground storage tanks and dispensers in June 2003. Quarterly groundwater monitoring has been conducted at the site since August 1989. The consultant overseeing this case is also overseeing the Former Chevron Station (H13261-002) and Former Shell Station (H03229-001) that are located on Rancho Santa Fe Road. Groundwater at the three sites is jointly monitored and sampled. See ESI for additional information.

Site History :

An underground storage tank was damaged during well installation activities resulting in a subsurface release of approximately 3,200 gallons of unleaded gasoline. Contaminated soil was discovered during the removal of the waste oil tank in April 1991, and the gasoline underground storage tanks and dispensers in June 2003. Quarterly groundwater monitoring has been conducted at the site since August 1989. The consultant overseeing this case is also overseeing the Former Chevron Station (H13261-002) and Former Shell Station (H03229-001) that are located on Rancho Santa Fe Road. Groundwater at the three sites is jointly monitored and sampled. See ESI for additional information.

Site History :

This site is under an investigative order (Order R9-2006-0044) requiring the discharger to initiate an Evluation Monitoring Program (EMP under CCR Tiitle 27) submittal of an amended Report of Waste Discharge (ROWD). The ROWD should be submitted to the Regional Board for review and comment in June 2009. Upon completion of the ROWD, the Regional Board will issue a corrective action monitoring program and likely, a cleanup and abatement order to implement corrective action alternatives at the site. Corrective action is complete and the site is no longer in cost recovery.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Site History :

This site is under an investigative order (Order R9-2006-0044) requiring the discharger to initiate an Evluation Monitoring Program (EMP under CCR Tiitle 27) submittal of an amended Report of Waste Discharge (ROWD). The ROWD should be submitted to the Regional Board for review and comment in June 2009. Upon completion of the ROWD, the Regional Board will issue a corrective action monitoring program and likely, a cleanup and abatement order to implement corrective action alternatives at the site. Corrective action is complete and the site is no longer in cost recovery.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description
Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :

ICIS provides a database that, when complete, will contain enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.

Source Description

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.
HWTS-DATAMART provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Source Description

Source Description :

The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Waste Generator Details

Details for this site have been truncated due to the large number of available details for this site within this dataset. For the complete details for this site, contact your Envirosite account representative for a complimentary site report containing all of the details available.

State Waste :

2007: 213 - Hydrocarbon solvents (benzene, hexane, Stoddard, Etc.), 0.1668 tons to CAD044429835
2007: 331 - Off-specification, aged or surplus organics, 0.594 tons to CAD044429835
2006: 181 - Other inorganic solid waste, 0.18 tons to CAD028409019
2006: 343 - Unspecified organic liquid mixture, 0.374 tons to CAT080013352
2006: 331 - Off-specification, aged or surplus organics, 0.0825 tons to CAD044429835
2005: 343 - Unspecified organic liquid mixture, 1.071 tons to CAT080013352
2004: 352 - Other organic solids, 0.075 tons to CAD008252405
2004: 352 - Other organic solids, 0.5 tons to CAT080033681
2003: 352 - Other organic solids, 0.125 tons to IND000646943
2003: 352 - Other organic solids, 0.04 tons to CAT080033681
2002: 352 - Other organic solids, 0.6 tons to CAT080033681
2002: 352 - Other organic solids, 0.355 tons to CAD980884183
2001: 134 - Aqueous solution with total organic residues less than 10 percent, 0.65 tons to CAT080013352
2001: 352 - Other organic solids, 0.15 tons to CAD980884183
2000: 352 - Other organic solids, 5.45 tons to CAT080033681
1999: 181 - Other inorganic solid waste, 7.8 tons to CAT080033681
1999: 133 - Aqueous solution with total organic residues 10 percent or more, 0.6255 tons to CAT080013352
1999: 352 - Other organic solids, 0.3 tons to CAT080033681
1998: 133 - Aqueous solution with total organic residues 10 percent or more, 0.417 tons to CAT080013352
1998: 352 - Other organic solids, 0.0275 tons to CAD028409019
1997: 223 - Unspecified oil-containing waste, 0.075 tons to CAD050806850
1997: 221 - Waste oil and mixed oil, 0.418 tons to CAT080025711
1997: 741 - Liquids with halogenated organic compounds >= 1,000 Mg. /L, 0.2 tons to CAD050806850
1997: 352 - Other organic solids, 0.1075 tons to CAD028409019
1997: 133 - Aqueous solution with total organic residues 10 percent or more, 0.0834 tons to CAT080013352
1996: 214 - Unspecified solvent mixture, 0.198 tons to AZD049318009
1995: 223 - Unspecified oil-containing waste, 0.075 tons to CAD050806850
1995: 741 - Liquids with halogenated organic compounds >= 1,000 Mg. /L, 0.2 tons to CAD050806850

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

Source Description

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description : All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Site History :

This Voluntary Assistance Program Case was opened in February 14, 2014 to further evaluate the impacts from chlorinated compounds and provide mitigation, if needed, for a former dry cleaner. Five soil borings were installed on site as part of a July 2006, Phase II Environmental Site Assessment Report. Groundwater samples were taken from the borings which were then converted to soil vapor probes. Additional site assessment was performed in June to July 2015 with the installation of eight soil vapor probes. These probes were sampled three times within a six week period. In addition, three permanent Monitoring Wells (MWs) were installed. Based on the concentrations of PCE and TCE from the soil borings, vapor probes, and MWs, it was determined that a greater than one in a million excess cancer risk existed on site. DEH concurred with this and recommended further evaluation. On June 28, 2017, SCS Engineers (SCS) conducted a radon tracer study to evaluate a site-specific slab attenuation rate. The results of such were submitted in a November 28, 2017 Subsurface Assessment Report and Vapor Intrusion Risk Assessment (SAR-VIRA). The SAR-VIRA compiled the sub-slab soil vapor results and the radon study and concluded that indoor air would be below screening levels for PCE and TCE. DEH indicated that indoor air sampling and an additional round of groundwater sampling be performed to provide a third line of evidence. An April 19, 2018 Groundwater and Indoor Air Sampling Report indicated that PCE and TCE were not present in detectable concentrations in Indoor Air (IA). Volatile Organic Compounds such as benzene, which were present in IA, were also present in the Outdoor Ambient Air (OA) sample. SCS concluded that they were most likely associated with the gasoline service station adjacent to the site. Moreover, other compounds, such as carbon tetrachloride, were present in equal amounts in the IA and OA samples. Based on this the consultant concluded that these compounds are typical of urban areas and are not associated with the dry cleaning chlorinated release from this site. The presence of chloroform in the IA sample nearest the restroom is most likely from chlorinated tap water. This is because the toilet was continuously running due to plumbing issues during the collection of IA samples. SCS states that because PCE, TCE, and the breakdown products were not reported at detectible concentrations in indoor air, in conjunction with other lines of evidence (SAR-VIRA and the radon tracer study), a significant health risk does not exist at the Site as a result of vapor phase migration of PCE and TCE in soil vapor. DEH concurs. SCS further states

that PCE and TCE concentrations in groundwater are lower and are generally stable or decreasing. DEH also concurs.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

SCS concluded that they were most likely associated with the gasoline service station adjacent to the site. Moreover, other compounds, such as carbon tetrachloride, were present in equal amounts in the IA and OA samples. Based on this the consultant concluded that these compounds are typical of urban areas and are not associated with the dry cleaning chlorinated release from this site. The presence of chloroform in the IA sample nearest the restroom is most likely from chlorinated tap water. This is because the toilet was continuously running due to plumbing issues during the collection of IA samples. SCS states that because PCE, TCE, and the breakdown products were not reported at detectible concentrations in indoor air, in

conjunction with other lines of evidence (SAR-VIRA and the radon tracer study), a significant health risk does not exist at the Site as a result of vapor phase migration of PCE and TCE in soil vapor. DEH concurs. SCS further states that PCE and TCE concentrations in groundwater are lower and are generally stable or decreasing. DEH also concurs.

Site Details

Status Date :	2011-07-06
Status :	Completed - Case Closed
Begin Date :	1999-05-14
Global ID :	T0607302697

Site History :

The Site is a maintenance/operations facility owned and operated by the County of San Diego. In May 1999, two USTs were removed and soil samples were collected and analyzed under the direction of DEH. Based on laboratory results, case H04814-002 was opened on July 8, 1999. A total of seven groundwater monitoring wells have been installed to investigate the petroleum release at this Site. The wells were monitored and sampled at various times between 2000 and 2009. The sampling events demonstrated that the benzene and MTBE dissolved plumes have not migrated offsite and are localized in the area of the former underground storage tank and dispensers. The consultant, by trend analysis, estimates that benzene in groundwater will reach MCLs by 2015. The consultant estimates that MTBE in groundwater will reach MCLs by 2022. TBA concentrations in some wells have increased due to the breakdown of MTBE; however the plume appears stable and the residual TBA will not adversely impact human health or the environment. DEH estimates that TBA will attenuate to action levels 10 years beyond the degradation of MTBE or by approximately 2032. The consultant estimates that the volume of petroleum hydrocarbon-impacted soil with Total Petroleum Hydrocarbon concentrations as gasoline above 100 mg/kg is approximately 35 cubic yards. A Corrective Action Plan was prepared and completed its public review period on June 4, 2010. The remedial action chosen was natural attenuation. Additionally, public notification was completed to adjacent property owners. No groundwater production wells are located on, adjacent to or within mile of the Site. The closest surface water body to the Site is approximately 1.14 miles. The residual petroleum hydrocarbons in soil and groundwater do not present a significant risk to human health or the environment. DEH concurs with the recommendation of No Further Action.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description :

RCRAInfo is EPA’s comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Site History :

The Site is a maintenance/operations facility owned and operated by the County of San Diego. In May 1999, two USTs were removed and soil samples were collected and analyzed under the direction of DEH. Based on laboratory results, case H04814-002 was opened on July 8, 1999. A total of seven groundwater monitoring wells have been installed to investigate the petroleum release at this Site. The wells were monitored and sampled at various times between 2000 and 2009. The sampling events demonstrated that the benzene and MTBE dissolved plumes have not migrated offsite and are localized in the area of the former underground storage tank and dispensers. The consultant, by trend analysis, estimates that benzene in groundwater will reach MCLs by 2015. The consultant estimates that MTBE in groundwater will reach MCLs by 2022. TBA concentrations in some wells have increased due to the breakdown of MTBE; however the plume appears stable and the residual TBA will not adversely impact human health or the environment. DEH estimates that TBA will attenuate to action levels 10 years beyond the degradation of MTBE or by approximately 2032. The consultant estimates that the volume of petroleum hydrocarbon-impacted soil with Total Petroleum Hydrocarbon concentrations as gasoline above 100 mg/kg is approximately 35 cubic yards. A Corrective Action Plan was prepared and completed its public review period on June 4, 2010. The remedial action chosen was natural attenuation. Additionally, public notification was completed to adjacent property owners. No groundwater production wells are located on, adjacent to or within mile of the Site. The closest surface water body to the Site is approximately 1.14 miles. The residual petroleum hydrocarbons in soil and groundwater do not present a significant risk to human health or the environment. DEH concurs with the recommendation of No Further Action.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Description :

Historical Report Four parked garbage trucks caught fire at a waste and recycling service center. The San Marcos Fire Department responded to the site. The incident resulted in less than 200 gallons of hydraulic fluid being released from the vehicles. During the fire fighting efforts, personnel dispensed an estimated 15,000 gallons of fire suppression foam. An undetermined amount of the mixed material entered a storm drain that leads to a dry channel. The fire was extinguished and no injuries were reported. The cause of the fire is under investigation. The cleanup was completed by the business owner. ***Historical Report***

Source Description : The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description : RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.
The UORS is managed by the California Waste Management Board (CIWMB). The CIWMB helps communities establish and promote convenient collection opportunities for used oil and used oil filters.

Sub Area Name :	N/R
Document Type :	Site Screening

Comments :

PA Report was reviewed by Region 4 staff. The site is located at 217 Las Posas R. between Mission Rd. & Hwy 78 in San Marcos. The area is industrial, but Palomar College is north of Mission Rd. Site includes 4,000 sf bldg., 2 small storage sheds, outdoor drum storage area, and abandoned above ground storage tanks (550 gal.). Chemical company is still operating repackaging and storing various chemical products (Algi-gon pool treatment etc.). No sampling result were considered in EPA's PA. Staff recommends PEARM to de- termine if there is a problem DTSC should address.

Source Description

Source Description :

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Source Description

Source Description :

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Site Details

Status Date :	2017-11-01
Status :	Completed - Case Closed
Begin Date :	1986-04-25
Global ID :	T0607300358

Site History :

An unauthorized release case was opened for the site after routine tank testing in April 1986 indicated that leaks were occurring from an 8,000-gallon (also reported as 6,000 gallons) gasoline underground storage tank (UST). The UST and a second 10,000-gallon gasoline UST were removed from a common excavation on July 18, 1986. Numerous holes were present in both USTs, and free product was observed in the excavation. Laboratory analysis of the soil sample collected in the UST excavation showed a total extractable hydrocarbons concentration of 661 milligrams per kilogram (mg/kg). On January 30, 1996, a 15,000-gallon compartmentalized (7,500 gallon/7,500 gallons) UST was removed from the site. Soil staining and strong petroleum odors were observed, but no holes were noted in the tank. There are currently no USTs or dispenser islands on the property, and a commercial business occupies the building. Between August 1986 and April 2016, thirty-two groundwater monitoring wells were installed onsite and offsite to delineate the extent of contamination. Groundwater beneath the site has been designated as beneficial for municipal, agricultural, and industrial uses. The primary contaminants of concern identified in soil and groundwater include benzene, toluene, ethylbenzene, and xylenes (BTEX), methyl tertiary butyl ether (MTBE), and total petroleum hydrocarbons in the gasoline range (TPH-g). In 2001, approximately 1,519.37 tons of petroleum hydrocarbon-impacted soil were excavated and transported offsite to a licensed disposal facility. The excavated areas included the former fuel dispenser island and UST locations. Excavation base and sidewall soil samples were collected, and the consultant concluded that the majority of the TPH-g impacted soil had been removed. In 2011, a vapor risk assessment was conducted to evaluate whether the migration of petroleum hydrocarbon vapors is a potential health risk to the on-site building occupants. BTEX, naphthalene, and fuel oxygenates were not detected, and no significant risks were identified based on commercial use of the property. No groundwater production wells or sensitive receptors were identified within a 2500-foot radius of the site in a 2011 sensitive receptor survey. A December 2016 Corrective Action Plan (CAP) and a March 2017 CAP Addendum were prepared. The groundwater cleanup goals identified in the CAP were the California maximum contaminant levels (MCLs) for drinking water. The maximum benzene concentration reported in the most recent sampling event was 2,000 micrograms per liter (g/l) in a monitoring well located near the center of the plume. The consultant estimates that the timeline for dissolved benzene to reach its MCL of 1 g/l is approximately 60 years. Free product was previously observed in several wells, with a maximum thickness of 6.59 feet. There has been no documented free product reported at the site since 2001. The consultant concludes that the dissolved plume

beneath the site is stable and decreasing via natural attenuation, and recommends case closure under the State Water Resources Control BoardÆs Low-Threat UST Case Closure Policy (LTCP). A 60-day public notification period was completed to allow public review and comments on the CAP/CAP Addendum and DEHÆs intent to close the case. No comments were received. The nineteen remaining groundwater monitoring wells and two extraction wells associated with the site will be destroyed under permit number DEH2017-LMWP-003155.

Source Description

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Site History :

An unauthorized release case was opened for the site after routine tank testing in April 1986 indicated that leaks were occurring from an 8,000-gallon (also reported as 6,000 gallons) gasoline underground storage tank (UST). The UST and a second 10,000-gallon gasoline UST were removed from a common excavation on July 18, 1986. Numerous holes were present in both USTs, and free product was observed in the excavation. Laboratory analysis of the soil sample collected in the UST excavation showed a total extractable hydrocarbons concentration of 661 milligrams per kilogram (mg/kg). On January 30, 1996, a 15,000-gallon compartmentalized (7,500 gallon/7,500 gallons) UST was removed from the site. Soil staining and strong petroleum odors were observed, but no holes were noted in the tank. There are currently no USTs or dispenser islands on the property, and a commercial business occupies the building. Between August 1986 and April 2016, thirty-two groundwater monitoring wells were installed onsite and offsite to delineate the extent of contamination. Groundwater beneath the site has been designated as beneficial for municipal, agricultural, and industrial uses. The primary contaminants of concern identified in soil and groundwater include benzene, toluene, ethylbenzene, and xylenes (BTEX), methyl tertiary butyl ether (MTBE), and total petroleum hydrocarbons in the gasoline range (TPH-g). In 2001, approximately 1,519.37 tons of petroleum hydrocarbon-impacted soil were excavated and transported offsite to a licensed disposal facility. The excavated areas included the former fuel dispenser island and UST locations. Excavation base and sidewall soil samples were collected, and the consultant concluded that the majority of the TPH-g impacted soil

had been removed. In 2011, a vapor risk assessment was conducted to evaluate whether the migration of petroleum hydrocarbon vapors is a potential health risk to the on-site building occupants. BTEX, naphthalene, and fuel oxygenates were not detected, and no significant risks were identified based on commercial use of the property. No groundwater production wells or sensitive receptors were identified within a 2500-foot radius of the site in a 2011 sensitive receptor survey. A December 2016 Corrective Action Plan (CAP) and a March 2017 CAP Addendum were prepared. The groundwater cleanup goals identified in the CAP were the California maximum contaminant levels (MCLs) for drinking water. The maximum benzene concentration reported in the most recent sampling event was 2,000 micrograms per liter (g/l) in a monitoring well located near the center of the plume. The consultant estimates that the timeline for dissolved benzene to reach its MCL of 1 g/l is approximately 60 years. Free product was previously observed in several wells, with a maximum thickness of 6.59 feet. There has been no documented free product reported at the site since 2001. The consultant concludes that the dissolved plume beneath the site is stable and decreasing via natural attenuation, and recommends case closure under the State Water Resources Control BoardÆs Low-Threat UST Case Closure Policy (LTCP). A 60-day public notification period was completed to allow public review and comments on the CAP/CAP Addendum and DEHÆs intent to close the case. No comments were received. The nineteen remaining groundwater monitoring wells and two extraction wells associated with the site will be destroyed under permit number DEH2017-LMWP-003155.

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Description :

Handlers that generate 1,000 kg or more of hazardous waste during any calendar month; or generate more than 1 kg of acutely hazardous waste during any calendar month; or generate more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generate 1 kg or less of acutely hazardous waste during any calendar month, and accumulate more than 1 kg of acutely hazardous waste at any time; or generate 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulated more than 100 kg of that material at any time.

Report Cycle :	2011
Hazardous Waste Page Number :	1
Hazardous Waste Sub-Page Number :	1
BR Form :	GM
Waste Description :	SOLVENT CONTAMINATED WIPES FROM INSPECTION & CLEANING PROCESS
Primary NAICS :	326199 - All Other Plastics Product Manufacturing
Source Code :	G01 - Dip, flush or spray rinsing (using solvents to clean or prepare parts or assemblies for further processing - i.e. painting or assembly)
Form Code :	W409 - Other organic solids (specify in comments)
Management Method :	H141 - The site receiving this waste stored/bulked and transferred the waste with no treatment or recovery (H010-H129), fuel blending (H061), or disposal (H131-H135) at that receiving site.
Generation Tons :	2.175
Managed Tons :	0
Shipped Tons :	2.175
Received Tons :	0
Receiver ID :	CAD008252405
Receiver State :	CA
Shipper ID :	CAD008362634
Shipper State :	CA
Waste Minimization :	Y - Waste minimization was implemented and was successful in reducing quantity and/or toxicity (please detail reasons in the Comments section)
Waste Code List :	D001, F003
Waste Code Group :	F003 - THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCL
Waste Generation Type :	N/R
Report Cycle :	2011
Hazardous Waste Page Number :	10
Hazardous Waste Sub-Page Number :	1

Site History :

The Facility is approximately 11.8 acres in size and contains buildings associated with the manufacture, marketing, and distribution of optical lenses. Site assessment activities have been conducted at the Facility since the early 1990s. Investigations revealed the presence of VOCs, including methylene chloride, in soil and groundwater at the Facility. Signet has undertaken four remedial actions at the Facility, as well as subsequent investigation activities to assess the adequacy of the remedial actions. Active remediation has included operation of a multiphase extraction system (MPE system) from 1995 to 1998 to remove subsurface VOCs from source areas at the Facility. Additionally, three targeted source removal actions have been conducted at the Facility since 1986. Remedial activities have included removal and disposal of contaminated soil and addition of soil amendments to facilitate in-situ degradation. In late 2009, an interim remedial measure to extract VOCs from deep groundwater was evaluated, and the findings of this evaluation are incorporated into the CAP.

RB Case Number :	2091500
Potential Media Affected :	Aquifer used for drinking water supply
Potential Contaminants of Concern :	1,1,1-Trichloroethane (TCA), Acetone, Benzene, Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Freon, Diesel, Gasoline

Source Description :

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Source Description
Source Description :

AIR contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies. AFS contains compliance and permit data for stationary sources of air pollution regulated by the EPA, State, and Local air pollution agencies. All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database.

Source Description : The Emission Inventory System (EIS) maintains an inventory of large stationary sources and voluntarily-reported smaller sources of air point pollution emitters. It contains information about facility sites and their physical location, emission units, emission processes, release points, control approaches, and regulations. Facility inventory data are kept separate from the emissions data and have stable identifiers to improve continuity from year to year and to help identify duplicate or missing facilities.
HWTS-DATAMART provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Source Description :

RCRAInfo is EPA's comprehensive information system that supports the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984 through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA. RCRAInfo also supports generation of the National Hazardous Waste Biennial Report. All generators and treatment, storage, and disposal facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years to support creation of the Biennial Report.

Hazardous Waste Summary
Waste Code / Name :
122 - Alkaline solution without metals (pH > 12.5)
135 - Unspecified aqueous solution
181 - Other inorganic solid waste
212 - Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)
331 - Off-specification, aged, or surplus organics
352 - Other organic solids
551 - Laboratory waste chemicals
791 - Liquids with pH < 2
D001 - IGNITABLE WASTE
D002 - CORROSIVE WASTE

Corrective Action Summary
Date / Status / CA Event Description:
2018-06-11 (Active) CA550RC - REMEDY CONSTRUCTION-REMEDY CONSTRUCTED
2018-06-11 (Active) CA750YE - RELEASE TO GW CONTROLLED DETERMINATION-YES, APPLICABLE AS OF THIS DATE
1997-12-15 (Active) CA725YE - HUMAN EXPOSURES CONTROLLED DETERMINATION-YES, APPLICABLE AS OF THIS DATE
1997-12-15 (Active) CA750NO - RELEASE TO GW CONTROLLED DETERMINATION-FACILITY DOES NOT MEET DEFINITION
1997-12-15 (Inactive) CA210 - REFERRED TO A NON-RCRA AUTHORITY
1996-01-01 (Active) CA600SR - STABILIZATION/INTERIM MEASURES DECISION-PRIMARY MEAS IS SOURCE REMOVL &/OR TRT
1996-01-01 (Active) CA600GW - STABILIZATION/INTERIM MEASURES DECISION-GROUNDWATER EXTRACTION & TREATMENT
1992-01-31 (Active) CA225NR - STABILIZATION MEASURES EVALUATION-FACILITY NOT AMENABLE TO STABILIZATION
1992-01-15 (Active) CA075LO - CA PRIORITIZATION-LOW CA PRIORITY
1991-08-08 (Active) CA075LO - CA PRIORITIZATION-LOW CA PRIORITY

Site History :

The Facility is approximately 11.8 acres in size and contains buildings associated with the manufacture, marketing, and distribution of optical lenses. Site assessment activities have been conducted at the Facility since the early 1990s. Investigations revealed the presence of VOCs, including methylene chloride, in soil and groundwater at the Facility. Signet has undertaken four remedial actions at the Facility, as well as subsequent investigation activities to assess the adequacy of the remedial actions. Active remediation has included operation of a multiphase extraction system (MPE system) from 1995 to 1998 to remove subsurface VOCs from source areas at the Facility. Additionally, three targeted source removal actions have been conducted at the Facility since 1986. Remedial activities have included removal and disposal of contaminated soil and addition of soil amendments to facilitate in-situ degradation. In late 2009, an interim remedial measure to extract VOCs from deep groundwater was evaluated, and the findings of this evaluation are incorporated into the CAP.

RB Case Number :	2091500
Potential Media Affected :	Aquifer used for drinking water supply
Potential Contaminants of Concern :	1,1,1-Trichloroethane (TCA), Acetone, Benzene, Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Freon, Diesel, Gasoline
Local Agency :	N/R
Local Case Number :	H02662-001
Lead Agency :	SAN DIEGO RWQCB (REGION 9)
File Location :	Regional Board
CUF Case :	NO
Caseworker :	N/R

Source Description

Source Description :

HWTS-DATAMART provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.
The NPDES module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.
TRIS is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

TRIBAL ODI: Indian land open dump inventory for all regions

Agency Version Date: 02/21/2022
Agency Update Frequency: Varies
Planned Next Contact: 05/19/2022
Agency: Indian Health Service
Agency Contact: 301-443-3593
Most Recent Contact: 02/21/2022

HAULERS - CA: Waste Tire Manifest Program Hauler Registration listing

Agency Version Date: 12/29/2021
Agency Update Frequency: Varies
Planned Next Contact: 03/25/2022
Agency: California Department of Resources Recycling and Recovery (CalRecycle)
Agency Contact: 916-341-6066
Most Recent Contact: 12/29/2021

LF_SAN DIEGO COUNTY - CA: San Diego county landfill listing

Agency Version Date: 01/25/2022
Agency Update Frequency: Varies
Planned Next Contact: 04/22/2022
Agency: County of San Diego Department of Environmental Health
Agency Contact: 858-694-2801
Most Recent Contact: 01/25/2022

SWF_LOS ANGELES COUNTY - CA: Listing of Los Angeles County solid waste facilities

Agency Version Date: 02/23/2022
Agency Update Frequency: Varies
Planned Next Contact: 05/20/2022
Agency: LA County Department of Public Works
Agency Contact: 800-320-1771
Most Recent Contact: 02/23/2022

SWRCY - CA: Listing of facilities which perform recycled material processing activities

Agency Version Date: 02/15/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 05/12/2022
Agency: California Department of Resources Recycling and Recovery (CalRecycle)
Agency Contact: 916-341-6066
Most Recent Contact: 02/15/2022

OTHER ASCERTAINABLE RECORDS

AFS: Air Facility Systems Quarterly Extract

Agency Version Date: 01/31/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 04/28/2022
Agency: Environmental Protection Agency
Agency Contact: (202) 566-1667
Most Recent Contact: 01/31/2022

OTHER ASCERTAINABLE RECORDS (cont.)

ALT FUELING: Alternative Fueling Stations by fuel type.

Agency Version Date: 12/29/2021
Agency Update Frequency: Quarterly
Planned Next Contact: 03/25/2022
Agency: U.S. Department of Energy
Agency Contact: N/R
Most Recent Contact: 12/29/2021

BRS: Reporting of hazardous waste generation and management from large quantity generators

Agency Version Date: 12/30/2021
Agency Update Frequency: Biennial
Planned Next Contact: 03/28/2022
Agency: Environmental Protection Agency
Agency Contact: (202) 566-1667
Most Recent Contact: 12/30/2021

CDC HAZDAT: The Agency for Toxic Substances and Disease Registry's Hazardous Substance Release/Health Effects Database.

Agency Version Date: 01/28/2022
Agency Update Frequency: Varies
Planned Next Contact: 04/26/2022
Agency: Agency for Toxic Substances and Disease Registry
Agency Contact: 770-488-6399
Most Recent Contact: 01/28/2022

COAL ASH DOE: List of existing and planned generators with 1 megawatt or greater of combined capacity that are utilizing coal ash impoundments.

Agency Version Date: 09/29/2021
Agency Update Frequency: Varies
Planned Next Contact: 03/22/2022
Agency: Department of Energy
Agency Contact: (202) 586-8800
Most Recent Contact: 12/24/2021

COAL ASH EPA: Coal Combustion Residues Surface Impoundments List

Agency Version Date: 02/18/2021
Agency Update Frequency: Varies
Planned Next Contact: 04/29/2022
Agency: Environmental Protection Agency
Agency Contact: (202) 566-1667
Most Recent Contact: 02/01/2022

COAL GAS: Manufactured Gas Plant locations

Agency Version Date: 01/07/2022
Agency Update Frequency: Quarterly
Planned Next Contact: 04/05/2022
Agency: U.S. Environmental Protection Agency
Agency Contact: 855-246-3642
Most Recent Contact: 01/07/2022

COLLEGES: List of major Universities & Colleges

Agency Version Date: 02/08/2022
Agency Update Frequency: Varies
Planned Next Contact: 04/15/2022
Agency: DHS Homeland Infrastructure Foundation
Agency Contact: N/R
Most Recent Contact: 01/18/2022

COLLEGES 2: List of Universities & Colleges

Agency Version Date: 02/08/2022
Agency Update Frequency: Varies
Planned Next Contact: 04/18/2022
Agency: DHS Homeland Infrastructure Foundation
Agency Contact: N/R

HIST PWS ENF
Historical Public Water Supply locations with Enforcement Violations
Environmental Protection Agency
(800) 426-4791
List of Safe Drinking Water Information Systems (SDWIS) with enforcement violations that are no longer in current agency list.

NWIS
National Water Information Systems
United States Geological Society
(703) 648-5953
Information on all water resources for the United States. This database contains all current and historical data for the nation.

PWS
Public Water Supply
Environmental Protection Agency
(800) 426-4791
Safe drinking water information Systems

PWS ENF
Public Water Supply locations with Enforcement Violations
Environmental Protection Agency
(800) 426-4791
Safe drinking water information Systems with enforcememnt violations

WELLS - GAMA - CA
California Groundwater Ambient Monitoring Assessment
State Water Resources Control Board
916-341-5791
Brings together datasets from California state agencies including: Public Health Water Resources and Pesticide Regulation as well as from the US Geological Survey Lawrence Livermore National Laboratory and the Water Boards. It shows results for untreated raw water in different types of wells for naturally-occurring and man-made chemicals.

FLOOD Q3
Flood data
Environmental Protection Agency
(202) 566-1667
Q3 Flood Data

HYDROLOGIC UNIT
Hydrologic Unit Maps
USGS
The United States Geological Survey created a hierarchical system of hydrologic units originally called regions, sub-regions, accounting units, and cataloging units. Each unit was assigned a unique Hydrologic Unit Code (HUC). As first implemented the system had 21 regions, 221 subregions, 378 accounting units, and 2,264 cataloging units. Over time the system was changed and expanded. As of 2010 there are six levels in the hierarchy, represented by hydrologic unit codes from 2 to 12 digits long, called regions, subregions, basins, subbasins, watersheds, and subwatersheds. The table below describes the system's hydrologic unit levels and their characteristics, along with example names and codes.

WETLANDS NWI
National Wetland Inventory
U.S. Fish and Wildlife Service

(866) 835-5322
Airport landing facilities

BASINS
Better Assessment Science Integrating point & Non-point Sources
U.S. Environmental Protection Agency
855-246-3642
Integrated geographical information system national watershed data and environmental assessment known as Better Assessment Science Integrating point & Non-point Sources

DIGITAL OBSTACLE
Obstacles of interest to aviation users
Federal Aviation Administration
855-379-6518
The Digital Obstacle File describes all known obstacles of interest to aviation users in the U.S. with limited coverage of the Pacific the Caribbean Canada and Mexico. The obstacles are assigned unique numerical identifiers; accuracy codes and listed in order of ascending latitude within each state or area by FAA Region.

EPICENTERS
National Geographical Data Center
National Geographical Data Center
303-497-6826
List of recent and historic earthquakes and information.

FLOOD DFIRM
National Flood Hazard Layer Database
Federal Emergency Management Agency
The National Flood Hazard Layer Database (NFHL) is a computer database that contains the flood hazard map information from FEMAs Flood Map Modernization program. These map data are from Digital Flood Insurance Rate Map (DFIRM) databases and Letters of Map Revision.

N

The pin displayed on the map is an approximate point selected by the user and does not represent an authoritative property location.

This map complies with FEMA's standards for the use of digital flood maps if it is not void as described below. The basemap shown complies with FEMA's basemap accuracy standards

The flood hazard information is derived directly from the authoritative NFHL web services provided by FEMA. This map was exported on 3/28/2022 at 10:05 PM and does not reflect changes or amendments subsequent to this date and time. The NFHL and effective information may change or become superseded by new data over time.

This map image is void if the one or more of the following map elements do not appear: basemap imagery, flood zone labels, legend, scale bar, map creation date, community identifiers, FIRM panel number, and FIRM effective date. Map images for unmapped and unmodernized areas cannot be used for regulatory purposes.

APPENDIX E

Qualifications

Mark E. Smith
Environmental Professional
President, The Phase One Group LLC

PROFESSIONAL EDUCATION

University of California, Riverside (UCR), Riverside, CA, B.S. Environmental Science, 1994

CERTIFICATIONS/QUALIFICATIONS

- AHERA Asbestos Inspector
- 40-Hour OSHA HAZWOPER Training
- Certified Technical Writer

SELECTED EXPERIENCE

Mr. Smith has more than 25 years of experience in Phase 1 Environmental Site Assessments (Phase 1 ESAs) and Real Estate Transaction Screens of residential multifamily, commercial, retail, fueling facilities, agricultural and industrial properties throughout the United States for a wide range of financial clients, attorneys and real estate companies.

Mr. Smith has conducted over 2,300 environmental due diligence projects since 1994.

For a national environmental consulting firm, Mr. Smith served as a Senior Project Manager, where he supervised Phase I Environmental Site Assessments on various industrial, commercial, institutional and residential properties. Assessments included limited and comprehensive surveys for asbestos, lead-based paint, lead-in-drinking water and radon gas emissions. He also managed subsurface investigations to determine the presence of contamination in soil and groundwater, prepared and reviewed written reports in formats prescribed by various fiduciary institutions and performed peer reviews on environmental site assessments completed by other environmental firms. He was responsible for review of final reports and QA/QC.

In May 2007, Mr. Smith resigned from the national environmental consulting firm to start Smithmark LLC as an environmental subcontractor to provide Phase 1 ESA report services to existing national, regional and local environmental/engineering firms in need of report services for overflow projects unable to be covered by in-house staff. In February 2016, Mr. Smith dissolved Smithmark LLC and formed The Phase One Group LLC to provide Phase 1 ESA report services to property purchasers, brokers, investors and lenders.

PROFESSIONAL AFFILIATIONS:

- Association of Environmental Professionals, Los Angeles County Chapter, Member

RELEVANT PROJECT EXPERIENCE:

- **Embassy Suites – Glendale, California**

  Performed ESA of a 272-room Embassy Suites hotel facility in Glendale, California.

- **Limoneira Company – Santa Paula, California**

  Performed several ESAs of Limoneira Company corporate headquarters and numerous multi-acre orchards owned and operated by Limoneira Company.

- **Royal Truck Body – Paramount, California**
