Honorable Mayor and City Council, As a San Marcos resident who loves the coast and cares about its protection, it is very important to me that the City of San Marcos address the global plastic pollution crisis affecting our oceans with the urgency it requires. Thank you for directing city staff to draft a plastic pollution reduction ordinance for your review. I stand with The Surfrider Foundation in urging you to adopt the ordinance at your Oct 12 council meeting. The ordinance includes a generous timeline to ensure food service establishments have ample lead time to comply, along with proper exemptions to safeguard public health and residents with disabilities. Non-plastic food ware accessory alternatives are widely available in today's marketplace, and requiring customers to request them will save businesses money and put ownership over their consumption back where it belongs - with the customer. Requiring disposable food ware to be recyclable or compostable is a common sense measure to reduce overall waste that goes to landfill, especially in light of statewide mandates to provide organic composting per SB1383. Lastly, EPS foam fragments from food ware consistently rank as one of the top 3 items found in Surfrider beach cleanups countywide. In 2019, Surfrider volunteers removed over 34,000 pieces of EPS foam from San Diego County beaches. Due to its light weight and brittle nature, foam food ware quickly breaks down into smaller pieces and is notoriously difficult - and often impossible - to clean up. Most large fast food chains, McDonald's included, stopped using EPS foam in the late 1980's due to its poor environmental record. And over 100 California cities have successfully passed an EPS ordinance, including Encinitas, Solana Beach, Del Mar, San Diego, and Vista in San Diego County. Please protect our ocean, beaches and planet by voting to approve Ordinance 2021-1507. It is a great first step in the right direction for a cleaner San Marcos and a cleaner coastline. Thank you for your time and service. Sincerely,

Scollick, Phil

Honorable Mayor and City Council,

As San Diego County residents who love the coast and care about its protection, it is very important to us that all our local municipalities, including the City of San Marcos, address the global plastic pollution crisis affecting our oceans with the urgency it requires. We frequent local businesses and enthusiastically support efforts like the Single-Use Plastics ordinance for the long-term health and prosperity of all.

Thank you for directing city staff to draft a plastic pollution reduction ordinance for your review. South Bay People Power stands with The Surfrider Foundation in urging you to adopt the ordinance at your Oct 12 council meeting.

The ordinance includes a generous timeline to ensure food service establishments have ample lead time to comply, along with proper exemptions to safeguard public health and residents with disabilities.

Non-plastic food ware accessory alternatives are widely available in today's marketplace, and requiring customers to request them will save businesses money and put ownership over their consumption back where it belongs - with the customer.

Honorable Mayor and City Council,

As someone who loves the coast and cares about its protection, it is very important to me that the City of San Marcos address the global plastic pollution crisis affecting our oceans with the urgency it requires.

Thank you for directing city staff to draft a plastic pollution reduction ordinance for your review. I stand with The Surfrider Foundation in urging you to adopt the ordinance at your Oct 12 council meeting.

The ordinance includes a generous timeline to ensure food service establishments have ample lead time to comply, along with proper exemptions to safeguard public health and residents with disabilities.

Non-plastic food ware accessory alternatives are widely available in today's marketplace, and requiring customers to request them will save businesses money and put ownership over their consumption back where it belongs - with the customer.

Requiring disposable food ware to be recyclable or compostable is a common sense measure to reduce overall waste that goes to landfill, especially in light of statewide mandates to provide organic composting per SB1383.

Lastly, EPS foam fragments from food ware consistently rank as one of the top 3 items found in Surfrider beach cleanups countywide. In 2019, Surfrider volunteers removed over 34,000 pieces of EPS foam from San Diego County beaches. Due to its light weight and brittle nature, foam food ware quickly breaks down into smaller pieces and is notoriously difficult - and often impossible - to clean up.

Most large fast food chains, McDonald's included, stopped using EPS foam in the late 1980's due to its poor environmental record. And over 100 California cities have successfully passed an EPS ordinance, including Encinitas, Solana Beach, Del Mar, San Diego, and Vista in San Diego County.

Please protect our ocean, beaches and planet by voting to approve Ordinance 2021-1507. It is a great first step in the right direction for a cleaner San Marcos and a cleaner coastline. Thank you for your time and service.

Sincerely,
Denise McCulloch

Honorable Mayor and City Council, As a local resident who loves the coast and cares about its protection, it is very important to me that the City of San Marcos address the global plastic pollution crisis affecting our oceans with the urgency it requires. Thank you for directing city staff to draft a plastic pollution reduction ordinance for your review. I stand with The Surfrider Foundation in urging you to adopt the ordinance at your Oct 12 council meeting. The ordinance includes a generous timeline to ensure food service establishments have ample lead time to comply, along with proper exemptions to safeguard public health and residents with disabilities. Non-plastic food ware accessory alternatives are widely available in today's marketplace, and requiring customers to request them will save businesses money and put ownership over their consumption back where it belongs - with the customer. Requiring disposable food ware to be recyclable or compostable is a common sense measure to reduce overall waste that goes to landfill, especially in light of statewide mandates to provide organic composting per SB1383. Lastly, EPS foam fragments from food ware consistently rank as one of the top 3 items found in Surfrider beach cleanups countywide. In 2019, Surfrider volunteers removed over 34,000 pieces of EPS foam from San Diego County beaches. Due to its light weight and brittle nature, foam food ware quickly breaks down into smaller pieces and is notoriously difficult - and often impossible - to clean up. In 2019, Surfrider volunteers removed over 34,000 pieces of EPS foam from San Diego County beaches. Due to its light weight and brittle nature, foam food ware quickly breaks down into smaller pieces and is notoriously difficult - and often impossible - to clean up.

Most large fast food chains, McDonald's included, stopped using EPS foam in the late 1980's due to its poor environmental record. And over 100 California cities have successfully passed an EPS ordinance, including Encinitas, Solana Beach, Del Mar, San Diego, and Vista in San Diego County.

Please protect our ocean, beaches and planet by voting to approve Ordinance 2021-1507. It is a great first step in the right direction for a cleaner San Marcos and a cleaner coastline. Thank you for your time and service.

Sincerely,
Cameron Wilkie

Honorable Mayor and City Council,

As a San Marcos resident who loves the coast and cares about its protection, it is very important to me that the City of San Marcos address the global plastic pollution crisis affecting our oceans with the urgency it requires.

Thank you for directing city staff to draft a plastic pollution reduction ordinance for your review. I stand with The Surfrider Foundation in urging you to adopt the ordinance at your Oct 12 council meeting.

The ordinance includes a generous timeline to ensure food service establishments have ample lead time to comply, along with proper exemptions to safeguard public health and residents with disabilities.

Non-plastic food ware accessory alternatives are widely available in today's marketplace, and requiring customers to request them will save businesses money and put ownership over their consumption back where it belongs - with the customer.

Requiring disposable food ware to be recyclable or compostable is a common sense measure to reduce overall waste that goes to landfill, especially in light of statewide mandates to provide organic composting per SB1383.

Lastly, EPS foam fragments from food ware consistently rank as one of the top 3 items found in Surfrider beach cleanups countywide. In 2019, Surfrider volunteers removed over 34,000 pieces of EPS foam from San Diego County beaches. Due to its light weight and brittle nature, foam food ware quickly breaks down into smaller pieces and is notoriously difficult - and often impossible - to clean up.

Honorable Mayor and City Council,

Reducing plastic also helps with obesity! I stopped using a straw when I buy a soda. You will drink much less of these sugary drinks and enjoy them more.

Try it and help everyone else try it too!

City Council Members,

I strongly encourage you to adopt the plastic reduction ordinance proposed in San Marcos. The city's pollution problem has become overwhelming, and I feel that every one of us (and that includes businesses) must do their part resolve this issue. Please help preserve and protect our city and our coastline.

Dear Honorable Council Members,

I am thrilled that you are considering an ordinance to address plastic pollution. Once a person starts thinking about the waste produced in our society and realizes that it doesn't always get recycled it is hard to not think about where it ends up. Over the course of the last few years, I have undergone a green evolution. As I have done so, I feel like local communities have as well. At our home, we went from recycling to reducing. Reduction is truly the most effective way to reduce waste and fight climate change. Plastic production pollutes our planet from the moment it is withdrawn from our Earth, at every step in its production and distribution and supposed recycling.

I love the quote, "There is no 'away' in throw away." I hope you are able to pass this Citywide Plastic Pollution Ordinance and help our local communities move in this direction.

Sincerely,
Mandy Oliphant

Honorable Mayor and City Council, As a San Marcos resident who loves the coast and cares about its protection, it is very important to me that the City of San Marcos address the global plastic pollution crisis affecting our oceans with the urgency it requires. Thank you for directing city staff to draft a plastic pollution reduction ordinance for your review. I stand with The Surfrider Foundation in urging you to adopt the ordinance at your Oct 12 council meeting. The ordinance includes a generous timeline to ensure food service establishments have ample lead time to comply, along with proper exemptions to safeguard public health and residents with disabilities. Non-plastic food ware accessory alternatives are widely available in today's marketplace, and requiring customers to request them will save businesses money and put ownership over their consumption back where it belongs - with the customer. Requiring disposable food ware to be recyclable or compostable is a common sense measure to reduce overall waste that goes to landfill, especially in light of statewide mandates to provide organic composting per SB1383. Lastly, EPS foam fragments from food ware consistently rank as one of the top 3 items found in Surfrider beach cleanups countywide. In 2019, Surfrider volunteers removed over 34,000 pieces of EPS foam from San Diego County beaches. Due to its light weight and brittle nature, foam food ware quickly breaks down into smaller pieces and is notoriously difficult - and often impossible - to clean up. Most large fast food chains, McDonald's included, stopped using EPS foam in the late 1980's due to its poor environmental record. And over 100 California cities have successfully passed an EPS ordinance, including Encinitas, Solana Beach, Del Mar, San Diego, and Vista in San Diego County. Please protect our ocean, beaches and planet by voting to approve Ordinance 2021-1507. It is a great first step in the right direction for a cleaner San Marcos and a cleaner coastline. Thank you for your time and service. Sincerely,

Scollick, Phil

Honorable Mayor and City Council,

As a San Marcos resident who loves the coast and cares about its protection, it is very important to me that the City of San Marcos address the global plastic pollution crisis affecting our oceans with the urgency it requires.

Thank you for directing city staff to draft a plastic pollution reduction ordinance for your review. I stand with The Surfrider Foundation in urging you to adopt the ordinance at your Oct 12 council meeting.

The ordinance includes a generous timeline to ensure food service establishments have ample lead time to comply, along with proper exemptions to safeguard public health and residents with disabilities.

Non-plastic food ware accessory alternatives are widely available in today's marketplace, and requiring customers to request them will save businesses money and put ownership over their consumption back where it belongs - with the customer.

Requiring disposable food ware to be recyclable or compostable is a common sense measure to reduce overall waste that goes to landfill, especially in light of statewide mandates to provide organic composting per SB1383.

Lastly, EPS foam fragments from food ware consistently rank as one of the top 3 items found in Surfrider beach cleanups countywide. In 2019, Surfrider volunteers removed over 34,000 pieces of EPS foam from San Diego County beaches. Due to its light weight and brittle nature, foam food ware quickly breaks down into smaller pieces and is notoriously difficult - and often impossible - to clean up.

Most large fast food chains, McDonald's included, stopped using EPS foam in the late 1980's due to its poor environmental record. And over 100 California cities have successfully passed an EPS ordinance, including Encinitas, Solana Beach, Del Mar, San Diego, and Vista in San Diego County.

Please protect our ocean, beaches and planet by voting to approve Ordinance 2021-1507. It is a great first step in the right direction for a cleaner San Marcos and a cleaner coastline. Thank you for your time and service.

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Honorable Mayor and City Council,

Hello. My name is Kent Oberlin and I live in San Marcos, California. I run my own business and have a family to keep up with including my wife of 20 years, and two daughters at ages 13 and 16 years. Needless to say I have a priority list I must stick to, of which my family is on and is number one! Number two on the list? Taking action and dutifully bearing my responsibility as an inhabitant of this beautiful nation and planet which I love dearly, to keep it as beautiful and bountiful as when I arrived!

I want my children to be able to enjoy it as much as me as they grow into their own version of responsible citizens. That is why I am writing to you to voice my opinion regarding the subject of this email, reducing our reliance on single use plastics.

My oldest daughter attends San Marcos High School and has taken on the role in the Associated Student Body of the Recycling Ambassador. She requested this appointment on her own and brought it my attention after her nomination succeeded. Suffice to say I was proud and honored that she voluntarily took on this responsibility. At age 16, when there are many competing priorities in a young adult's life, she chose a noble and important path. I am honored in that she is representing her entire school's student body (4000 students!) and that I might have had something to do with it, being a like-minded environmentally-aware citizen myself.

On a quick note, just today I did my usual shopping run at Sprouts Farmer's Market on Las Posas and continue to be amazed at how much single use plastic is present throughout the store. On top of that when given the choice consumers will choose plastic over glass containers, using produce bags instead of their own re-usable bags (or not using any bags at all), and plastic bags over paper at checkout. So leaving the plastic crisis in the hands of consumers is not working. End user recycling has proven fairly ineffective and offers no improvement to this hole we have dug especially with the ever and more rapidly growing reliance on single use plastics.

Lastly I have travelled world, and many countries have a huge plastic mountain to climb, and while one city like San Marcos moving forward with such an ordinance may not solve the world's plastic problem, it will set an example to others on what we must do to chip away at it.

In closing please consider my thoughts on this, as well as the future of our planet, and legacy we will leave behind for our children. Wouldn't it be a shame, not only to knowingly destroy our vital planetary ecosystems, but to know that future groups of people including everyday professionals, scientists, researchers, archaeologists, etc, might very well categorize our generation as the Plastic generation? I would rather be remembered as the first post industrialized people to change the tides and reduce

our reliance on single use plastic (and fossil fuels for that matter). I hope you will move forward with Ordinance 2021-1507, Single-Use Plastics.

Sincerely,

Kent Oberlin

Honorable Mayor and City Council,

As a San Marcos resident who loves the coast and cares about its protection, it is very important to me that the City of San Marcos address the global plastic pollution crisis affecting our oceans with the urgency it requires.

Thank you for directing city staff to draft a plastic pollution reduction ordinance for your review. I stand with The Surfrider Foundation in urging you to adopt the ordinance at your Oct 12 council meeting.

The ordinance includes a generous timeline to ensure food service establishments have ample lead time to comply, along with proper exemptions to safeguard public health and residents with disabilities.

Non-plastic food ware accessory alternatives are widely available in today's marketplace, and requiring customers to request them will save businesses money and put ownership over their consumption back where it belongs - with the customer.

Requiring disposable food ware to be recyclable or compostable is a common sense measure to reduce overall waste that goes to landfill, especially in light of statewide mandates to provide organic composting per SB1383.

Lastly, EPS foam fragments from food ware consistently rank as one of the top 3 items found in Surfrider beach cleanups countywide. In 2019, Surfrider volunteers removed over 34,000 pieces of EPS foam from San Diego County beaches. Due to its light weight and brittle nature, foam food ware quickly breaks down into smaller pieces and is notoriously difficult - and often impossible - to clean up.

Most large fast food chains, McDonald's included, stopped using EPS foam in the late 1980's due to its poor environmental record. And over 100 California cities have successfully passed an EPS ordinance, including Encinitas, Solana Beach, Del Mar, San Diego, and Vista in San Diego County.

Please protect our ocean, beaches and planet by voting to approve Ordinance 2021-1507. It is a great first step in the right direction for a cleaner San Marcos and a cleaner coastline. Thank you for your time and service.

Sincerely,
Adam Clements

Lastly, EPS foam fragments from food ware consistently rank as one of the top 3 items found in Surfrider beach cleanups countywide. In 2019, Surfrider volunteers removed over 34,000 pieces of EPS foam from San Diego County beaches. Due to its light weight and brittle nature, foam food ware quickly breaks down into smaller pieces and is notoriously difficult - and often impossible - to clean up.

Most large fast food chains, McDonald's included, stopped using EPS foam in the late 1980's due to its poor environmental record. And over 100 California cities have successfully passed an EPS ordinance, including Encinitas, Solana Beach, Del Mar, San Diego, and Vista in San Diego County.

Please protect our ocean, beaches and planet by voting to approve Ordinance 2021-1507. It is a great first step in the right direction for a cleaner San Marcos and a cleaner coastline. Thank you for your time and service.

Sincerely,

Moto Nakanishi

Honorable Mayor and City Council,

As a San Marcos resident who loves the coast and cares about its protection, it is very important to me that the City of San Marcos address the global plastic pollution crisis affecting our oceans with the urgency it requires.

Thank you for directing city staff to draft a plastic pollution reduction ordinance for your review. I stand with The Surfrider Foundation in urging you to adopt the ordinance at your Oct 12 council meeting.

The ordinance includes a generous timeline to ensure food service establishments have ample lead time to comply, along with proper exemptions to safeguard public health and residents with disabilities.

Non-plastic food ware accessory alternatives are widely available in today's marketplace, and requiring customers to request them will save businesses money and put ownership over their consumption back where it belongs - with the customer.

Requiring disposable food ware to be recyclable or compostable is a common sense measure to reduce overall waste that goes to landfill, especially in light of statewide mandates to provide organic composting per SB1383.

Lastly, EPS foam fragments from food ware consistently rank as one of the top 3 items found in Surfrider beach cleanups countywide. In 2019, Surfrider volunteers removed over 34,000 pieces of EPS foam from San Diego County beaches. Due to its light weight and brittle nature, foam food ware quickly breaks down into smaller pieces and is notoriously difficult - and often impossible - to clean up.

Honorable Mayor and City Council,

As a San Marcos resident who loves this City, the coast and ocean, and cares about its protection, it is very important to me that the City of San Marcos address the global plastic pollution crisis affecting our oceans with the urgency it requires.

Thank you for directing city staff to draft a plastic pollution reduction ordinance for your review

I volunteered in recent local clean up efforts, including the September 4 San Marcos clean up sponsored by The Surfrider Foundation, Universidad Popular and Councilmember Randy Walton. I personally saw the mounds of single use plastics removed from our streets by 200 volunteers, including a high number of youth and young adults with families. I attached a picture of one such mound. Youth and young adults are especially concerned with what will be left for their future. As stewards of this earth, we MUST change our policies through ordinances like this one which provide rules and regulations on environmentally unfriendly products. By voting for this ordinance, you can reduced those plastics and provide our youth and families with a CLEAN SAN MARCOS for the future!

I urge you to adopt the Ordinance 2021-1507 at the October 12 council meeting because it has common sense measures. The ordinance provides a generous timeline and ample lead time for food service establishments to comply, along with proper exemptions to safeguard public health and residents with disabilities. The world is changing and the market for non-plastic food ware accessory alternatives are easily available. Requiring customers to request them puts the onus on customers and should save businesses money. Common sense and a desire to protect the environment in which we live should lead you to adopt the ordinance requirement for disposable food ware to be recyclable or compostable which will reduce overall waste that goes to landfill, especially in light of statewide mandates to provide organic composting per SB1383.

Furthermore, this ordinance will help protect our oceans and beaches. *Expanded Polystyrene* (EPS) foam fragments from food ware consistently rank as one of the top 3 items found in Surfrider beach cleanups countywide. In 2019, Surfrider volunteers removed over 34,000 pieces of EPS foam from San Diego County beaches. Due to its light weight and brittle nature, foam food ware quickly breaks down into smaller pieces and is notoriously difficult - and often impossible - to clean up. Most large fast food chains, McDonald's included, stopped using EPS foam in the late 1980's due to its poor environmental record. And over 100 California cities have successfully passed an EPS ordinance, including Encinitas, Solana Beach, Del Mar, San Diego, and Vista in San Diego County.

Please protect our ocean, beaches and planet by voting to approve Ordinance 2021-1507. Your vote will reveal to all citizens of San Marcos your commitment and determination to work toward a cleaner, eco-friendly San Marcos, a cleaner, greener coastline and a safer environment for marine life.

Thank you for your time and service.

Sincerely,
Barbara Sulier

Honorable Mayor and City Council,

As a San Marcos resident who loves the coast and cares about its protection, it is very important to me that the City of San Marcos address the global plastic pollution crisis affecting our oceans with the urgency it requires.

Thank you for directing city staff to draft a plastic pollution reduction ordinance for your review. I stand with The Surfrider Foundation in urging you to adopt the ordinance at your Oct 12 council meeting.

The ordinance includes a generous timeline to ensure food service establishments have ample lead time to comply, along with proper exemptions to safeguard public health and residents with disabilities.

Non-plastic food ware accessory alternatives are widely available in today's marketplace, and requiring customers to request them will save businesses money and put ownership over their consumption back where it belongs - with the customer.

Requiring disposable food ware to be recyclable or compostable is a common sense measure to reduce overall waste that goes to landfill, especially in light of statewide mandates to provide organic composting per SB1383.

Lastly, EPS foam fragments from food ware consistently rank as one of the top 3 items found in Surfrider beach cleanups countywide. In 2019, Surfrider volunteers removed over 34,000 pieces of EPS foam from San Diego County beaches. Due to its light weight and brittle nature, foam food ware quickly breaks down into smaller pieces and is notoriously difficult - and often impossible - to clean up.

Most large fast food chains, McDonald's included, stopped using EPS foam in the late 1980's due to its poor environmental record. And over 100 California cities have successfully passed an EPS ordinance, including Encinitas, Solana Beach, Del Mar, San Diego, and Vista in San Diego County.

Please protect our ocean, beaches and planet by voting to approve Ordinance 2021-1507. It is a great first step in the right direction for a cleaner San Marcos and a cleaner coastline. Thank you for your time and service.

Sincerely,

Scollick, Phil
